

FROG DISSECTION

EXTERNAL AND INTERNAL ANATOMY

EXTERNAL ANATOMY

- Notice how thin the Skin is.
- Locate the external Nares or nostrils
- Locate the Eyes and find the Nictitating Membrane, a 3rd eyelid -
- This covers the eyes when the frog is under water.
- Locate the Tympanic Membrane (large circular areas) or ear drums just posterior to the eyes.

- Locate the Shoulder, Elbow, and Wrist Joints of the Forelimbs.
- How many Digits(fingers) are there to a Forelimb?
- Near the end of the body is the opening of the Cloaca(feces, urine, and reproductive cells are expelled here)

HINDLIMBS

- Examine the muscular **Hindlimbs**
- Locate the Thigh, Knee, and Ankle Joints
- Examine the Webs of the foot.

How many Digits are there to each

Hindlimb?

INSIDE THE MOUTH

- Pry the Mouth open. Cut Jaws at joints. Examine inside of mouth.
- Eustachian Tubes are near the corners of the mouth. Insert probe into opening and push-observe where it comes out.
- Two large Muscular Pads are in the roof of the mouth(eyes retract here when it blinks)
- Locate Tongue. What unusual features do you notice?

TEETH

- Find two bony knobs projecting from the upper roof of the mouth
- These are the Vomerine teeth.
- If you rub your finger along the inside of the jaw, you will feel the Maxillary Teeth.

INTERNAL ANATOMY

- With forceps lift Skin over the frog's abdomen and cut away.
- The large brown gland of 3 lobes is the Liver.
- Locate Gall Bladder(greenish sac under left lobes of liver.
- Beneath liver is the Stomach.
- Locate Small Intestine (attached to end of stomach)
- Locate Large Intestine.

- Cut the Pericardium that surrounds the Heart and observe the three chambers.
- Locate two Lungs.
- Against the back body wall are two oblong Kidneys(males have oval Testis attached to each kidney-females have which may have eggs)
- Cut away long fingerlike projections called Fat Bodies

BRAIN

- Remove skin from top of head and neck.
- Cut through Cranium to expose brain.
