

5-Shearing

It produce a distortion of an object. There are two types of shearing

1- Y shearing

It transform the point (X,Y) to the point (Xnew,Ynew) where

$$X_{new} = X$$

$$Y_{new} = Y + Sh_y * X \quad \text{where } Sh_y \neq 0$$

The matrix is

1	Sh _y	0
0	1	0
0	0	1

Y shearing moves a vertical line up or down depending on the sign of the shear factor Sh_y. A horizontal line is distorted into a line with slop Sh_y. And vis versa.

2- X shearing

It transform the point (X,Y) to the point (Xnew,Ynew) where

$$X_{new} = X + Sh_x * Y \quad \text{where } Sh_x \neq 0$$

$$Y_{new} = Y$$

The matrix is

1	0	0
Sh _x	1	0
0	0	1

Example : Share the object (1,1) , (3,1) , (1,3) , (3,3) with

a: Sh_x=2

b: Sh_y=2

Solution : a: Sh_x=2

1	1	1	*	1	0	0	=	3	1	1
3	1	1		2	1	0		5	1	1
1	3	1		0	0	1		7	3	1
3	3	1						9	3	1

b- Shy

$$\begin{array}{|c|c|c|} \hline 1 & 1 & 1 \\ \hline 3 & 1 & 1 \\ \hline 1 & 3 & 1 \\ \hline 3 & 3 & 1 \\ \hline \end{array}
 *
 \begin{array}{|c|c|c|} \hline 1 & 2 & 0 \\ \hline 0 & 1 & 0 \\ \hline 0 & 0 & 1 \\ \hline \end{array}
 =
 \begin{array}{|c|c|c|} \hline 1 & 3 & 1 \\ \hline 3 & 7 & 1 \\ \hline 1 & 5 & 1 \\ \hline 3 & 9 & 1 \\ \hline \end{array}$$

Example : Draw the object $(5,30),(-5,30),(-11,24),$
 $(-5,18),(5,18),(11,24),(0,0)$

- 1- Share the object with $S_{hx}=-1$
- 2- Scale on $S_x=2$ and $S_y=1$
- 3- Rotate the object 11 times with $\theta = \pi/6$, draw the object after each rotation
