| Module Aims<br>أهداف المادة الدراسية                     | By the end of successful completion of this course, the student will be able to:<br>1. To develop mathematical skill so that students are able to sketch the graph of various functions and evaluates Limits by using different techniques including L'Hopital's Rule.<br>2. To apply mathematical methods and principals in solving various derivative problems from Engineering fields, involving applications of derivatives. |

|                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

To compute derivative and anti- derivative of algebraic, trigonometric, inverse trigonometric, exponential, logarithmic, and apply them to solve problems in a wide range of engineering applications.</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p><b>Module Learning Outcomes</b></p> <p>مخرجات التعلم للمادة الدراسية</p> | <p>1. To calculate Tangent line and slope problems.</p> <p>2. Apply Drawing of functions.</p> <p>3. Estimate Limit and continuity of functions.</p> <p>4. To find Limits at infinity, horizontal asymptote, infinite limits, vertical asymptotes and drawing of functions.</p> <p>5. Derivative of functions and rates of change. Differentiation of polynomials, product and quotient rules.</p> <p>6. Derivatives of exponential, logarithmic, and trigonometric functions.</p> <p>7. Chain rule and implicit differentiations.</p> <p>8. Applications of differentiation maximum and minimum values (the mean value theorem).</p> <p>9. Derivative of hyperbolic functions and indeterminate forms and L'hospital's rule.</p> <p>10. Optimization problems and anti-derivative of functions.</p> |

| <p><b>Module Learning Outcomes</b></p> <p>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. determine the resultant of Coplanar forces in two and three dimensions</li> <li>2. Introducing the concept of the free-body diagram for a particle.</li> <li>3. Show how to solve particle equilibrium problems using the equations of equilibrium.</li> <li>4. Provide a method for finding the moment of a force about a specified axis.</li> <li>5. Present methods for determining the resultants of non-concurrent force systems.</li> <li>6. Develop the equations of equilibrium for a rigid body.</li> <li>7. Introduce the concept of the free-body diagram for a rigid body.</li> <li>8. Show how to determine the forces in the members of a truss using the method of joints and the method of sections.</li> <li>9. Analyze the forces acting on the members of frames and machines composed of pin-connected members.</li> <li>10. Show how to determine the location of the center of gravity and centroid for a system of discrete particles and a body of arbitrary shape.</li> <li>11. Develop a method for determining the moment of inertia for an area.</li> <li>12. introduce the product of inertia and show how to determine the maximum and minimum moments of inertia of an area</li> <li>13. Introduce the concept of dry friction.</li> </ol> |
| <p><b>Indicative Contents</b></p> <p>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <ol style="list-style-type: none"> <li>1. Force system: Resultant of forces on particles in two and three dimensions.</li> <li>2. Equilibrium of particles: Free-Body-diagram, equation of equilibrium.</li> <li>3. Force System Resultants: resultant of force and moment on rigid body, couples, moment about point in two and three dimensions, moment about axis.</li> <li>4. Equilibrium of a Rigid Body: Free-Body Diagrams, Equations of Equilibrium.</li> <li>5. Trusses: method of joint and sections</li> <li>6. Frames: Free-Body Diagrams, Equations of Equilibrium.</li> <li>7. Centroid:Centroids of Lines, Areas, and Volumes.</li> <li>8. Moment of inertia: Parallel-Axis Theorem for an Area, Radius of Gyration of an Area,Moments of Inertia forComposite Areas.</li> <li>9. Friction:Mechanism of Dry Friction, Static Friction.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                  |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>The main strategy that will be adopted in delivering this module is to:</p> <ol style="list-style-type: none"> <li>1. Encourage students' participation in the exercises</li> <li>2. Refining and expanding their critical thinking skills.</li> </ol> <p>This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|-----|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 63  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 4.2 |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 87  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 5.8 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 150 |                                                                            |     |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |         | Time/Number | Weight (Marks)  | Week Due        | Relevant Learning Outcome |
|-----------------------------|---------|-------------|-----------------|-----------------|---------------------------|
| <b>Formative assessment</b> | Quizzes | 5           | <b>25% (25)</b> | 3, 5, 7, 11, 13 | LO # 1, 3, 5, 8, 11       |

|                      |                         |      |                     |          |               |
|----------------------|-------------------------|------|---------------------|----------|---------------|
|                      | Online Assignments (HW) | 3    | 6% (6)              | 2, 8, 12 | LO # 2, 6, 12 |
|                      | Onsite Assignments      | 3    | 5% (5)              | 4, 6, 14 | LO # 4, 7, 9  |
|                      | Report                  | 1    | 4% (4)              | 14       | LO # 10       |
|                      | Lab                     |      |                     |          |               |
| Summative assessment | Midterm Exam            | 2 hr | 10% (10)            | 9        | LO # 1 - 7    |
|                      | Final Exam              | 3 hr | 50% (50)            | 16       | LO # 1 - 13   |
| Total assessment     |                         |      | 100%<br>(100 Marks) |          |               |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                      |
|---------|---------------------------------------|
| Week 1  | Force system                          |
| Week 2  | Force system                          |
| Week 3  | Equilibrium of particles              |
| Week 4  | Equilibrium of particles              |
| Week 5  | Force System Resultants               |
| Week 6  | Force System Resultants               |
| Week 7  | Equilibrium of a Rigid Body           |
| Week 8  | Equilibrium of a Rigid Body           |
| Week 9  | Trusses: method of joint and sections |
| Week 10 | Trusses: method of joint and sections |
| Week 11 | Frames                                |
| Week 12 | Frames                                |
| Week 13 | Centroid                              |
| Week 14 | Moment of inertia                     |
| Week 15 | frictions                             |
| Week 16 | Final Exams                           |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |
|--------|------------------|
| Week 1 |                  |
| Week 2 |                  |
| Week 3 |                  |
| Week 4 |                  |
| Week 5 |                  |

| <p><b>Module Learning Outcomes</b></p> <p>مخرجات التعلم للمادة الدراسية</p>       | <ol style="list-style-type: none"> <li>1. Describe the translational motion of a single particle in terms of position and inertial frames, inertia, velocity, acceleration, linear momentum and force.</li> <li>2. Describe the rotational motion of a rigid body using the concepts of rotation angle, angular velocity, angular acceleration, angular momentum, moment of inertia, and torque.</li> <li>3. Identify the forces acting on ordinary mechanical systems to be gravity and electromagnetics (Drag force, frictional force, normal force, etc.).</li> <li>4. State the fundamental laws of kinematics and dynamics of rotational motion of a rigid body and use them to solve problems on simple rotational motion.</li> <li>5. Analyses the translational and rotational motion using a scalar approach based on the concepts of work, conservative and non-conservative forces, potential energy and conservation of mechanical energy.</li> <li>6. State the two conditions of static and dynamic equilibrium of a point particle and a rigid body, and use them to solve problems of static equilibrium.</li> <li>7. Define and calculate the following parameters of oscillatory and wave motion: amplitude, period, frequency, angular frequency, speed of a wave, energy transported, Power and intensity;</li> <li>8. Describe Simple Harmonic Motion qualitatively and quantitatively.</li> <li>9. Recognize and analyses some wave characteristics: principle of superposition, interference, diffraction, reflection, transmission, refraction, standing waves and Resonance.</li> <li>10. Define what is meant by: temperature, specific and molar heats of capacity.</li> </ol> |

| <p><b>Learning and Teaching Strategies</b></p> <p>استراتيجيات التعلم والتعليم</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p><b>Strategies</b></p>                                                          | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Week 1                                                     | Physics and measurement: Standards of length, mass and time, dimensional analysis.            |
| Week 2                                                     | Physics and measurement: Standards of length, mass and time, dimensional analysis.            |
| Week 3                                                     | Motion in one dimension: displacement, velocity, acceleration, motion diagrams.               |
| Week 4                                                     | Motion in one dimension: displacement, velocity, acceleration, motion diagrams.               |
| Week 5                                                     | Vectors: coordinate systems, vector and scalar quantities, some properties of vectors, adding |

|                |                                                                                                                                                              |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | vectors, subtracting vectors, multiplying a vector by a scalar                                                                                               |
| <b>Week 6</b>  | Vectors: coordinate systems, vector and scalar quantities, some properties of vectors, adding vectors, subtracting vectors, multiplying a vector by a scalar |
| <b>Week 7</b>  | Motion in two dimensions: the position, velocity and acceleration vectors.                                                                                   |
| <b>Week 8</b>  | Motion in two dimensions: the position, velocity and acceleration vectors.                                                                                   |
| <b>Week 9</b>  | The laws of motion: Newton's first law and inertial frames, Newton's second law, Newton's third law, forces of friction.                                     |
| <b>Week 10</b> | The laws of motion: Newton's first law and inertial frames, Newton's second law, Newton's third law, forces of friction.                                     |
| <b>Week 11</b> | Other applications of Newton's laws: examples of some applications, non-uniform circular motion.                                                             |
| <b>Week 12</b> | Fluid Mechanics: Pressure and density, Equations of Fluid static; Equations of fluid dynamics: Continuity and Bernoulli's equations.                         |
| <b>Week 13</b> | Temperature: thermometers and the Celsius temperature scale, the constant-volume gas thermometer and the absolute temperature scale.                         |
| <b>Week 14</b> | Energy and energy transfer: systems and environment, work done by a constant force, the scalar product of two vectors, work done by vary force.              |
| <b>Week 15</b> | Energy and energy transfer: systems and environment, work done by a constant force, the scalar product of two vectors, work done by vary force.              |
| <b>Week 16</b> | <b>Final Exam</b>                                                                                                                                            |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|               | Material Covered               |
|---------------|--------------------------------|
| <b>Week 1</b> | -                              |
| <b>Week 2</b> | Measurements and Data Analysis |
| <b>Week 3</b> | Measurements and Data Analysis |
| <b>Week 4</b> | Verification of Ohm's Law      |
| <b>Week 5</b> | Verification of Ohm's Law      |

|         |                                                                                   |
|---------|-----------------------------------------------------------------------------------|
| Week 6  | Temperature Dependence of Electrical Resistance                                   |
| Week 7  | Temperature Dependence of Electrical Resistance                                   |
| Week 8  | The Relationship between the Fusing Current of a conducting wire and its diameter |
| Week 9  | The Relationship between the Fusing Current of a conducting wire and its diameter |
| Week 10 | Electrical conduction through semiconductor                                       |
| Week 11 | Electrical conduction through semiconductor                                       |
| Week 12 | Determination of Dielectric Constant                                              |
| Week 13 | Determination of Dielectric Constant                                              |
| Week 14 | <b>Assessment</b>                                                                 |
| Week 15 | -                                                                                 |

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير            | Marks (%) | Definition                            |
|-----------------------------|------------------|--------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز             | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا            | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط              | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول              | 50 - 59   | Work meets minimum criteria           |
| Fail Group                  | FX – Fail        | راسب(قيد المعالجة) | (45-49)   | More work required but credit awarded |

|          |          |      |        |                                      |
|----------|----------|------|--------|--------------------------------------|
| (0 – 49) | F – Fail | راسب | (0-44) | Considerable amount of work required |
|----------|----------|------|--------|--------------------------------------|

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

|---------------------------------|-----------------------------------------------------------------------------------------------|
| المنهاج الاسبوعي النظري         |                                                                                               |
|                                 | Material Covered                                                                              |
| Week 1                          | Arabic grammar                                                                                |
| Week 2                          | Arabic grammar                                                                                |
| Week 3                          | Arabic grammar, Arabic grammar, its importance and place in the language.                     |
| Week 4                          | Arabic grammar, Hamza al-Wasl sites and parts.                                                |
| Week 5                          | Dictionaries of the Arabic language, And ways to reveal the meanings of words in dictionaries |

|         |                                                                                                                                            |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Week 6  | The rules of number and number, the rule of distinguishing the number and its formulation, the definition of the number and how to read it |
| Week 7  | Mid-term Exam + Unit-Step Forcing, Forced Response, the RLC Circuit                                                                        |
| Week 8  | Arabic literature / the most prominent features and characteristics of Arabic literature.                                                  |
| Week 9  | Arabic literature / Historical eras of Arabic literature.                                                                                  |
| Week 10 | Arabic literature / <b>The novel and its elements.</b>                                                                                     |
| Week 11 | Rhetoric/Truth and metaphor.                                                                                                               |
| Week 12 | Rhetoric/The arts of rhetoric                                                                                                              |
| Week 13 | Rhetoric/The arts of rhetoric                                                                                                              |
| Week 14 | Rhetoric/Poetry / Muallaqat poets and some contemporary poets.                                                                             |
| Week 15 | Rhetoric/Poetry / Muallaqat poets and some contemporary poets.                                                                             |
| Week 16 | <b>Preparatory week before the final Exam</b>                                                                                              |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |
|--------|------------------|
| Week 1 |                  |
| Week 2 |                  |
| Week 3 |                  |

### Learning and Teaching Resources

مصادر التعلم والتدريس

|                   | Text                                              | Available in the Library? |
|-------------------|---------------------------------------------------|---------------------------|
| Required Texts    | Lectures in the Arabic language.                  | Yes                       |
| Recommended Texts | Meanings of grammar / Prof. Dr. Fadel Al-Samarrai | No                        |
| Websites          |                                                   |                           |

### Grading Scheme

مخطط الدرجات

| Group         | Grade         | التقدير | Marks (%) | Definition              |
|---------------|---------------|---------|-----------|-------------------------|
| Success Group | A - Excellent | امتياز  | 90 - 100  | Outstanding Performance |

|                        |                  |                     |         |                                       |
|------------------------|------------------|---------------------|---------|---------------------------------------|
| (50 - 100)             | B - Very Good    | جيد جدا             | 80 - 89 | Above average with some errors        |
|                        | C - Good         | جيد                 | 70 - 79 | Sound work with notable errors        |
|                        | D - Satisfactory | متوسط               | 60 - 69 | Fair but with major shortcomings      |
|                        | E - Sufficient   | مقبول               | 50 - 59 | Work meets minimum criteria           |
| Fail Group<br>(0 – 49) | FX – Fail        | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
|                        | F – Fail         | راسب                | (0-44)  | Considerable amount of work required  |
|                        |                  |                     |         |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير | Marks (%) | Definition                       |
|-----------------------------|------------------|---------|-----------|----------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز  | 90 - 100  | Outstanding Performance          |
|                             | B - Very Good    | جيد جدا | 80 - 89   | Above average with some errors   |
|                             | C - Good         | جيد     | 70 - 79   | Sound work with notable errors   |
|                             | D - Satisfactory | متوسط   | 60 - 69   | Fair but with major shortcomings |

|                        |                |                     |         |                                       |
|------------------------|----------------|---------------------|---------|---------------------------------------|
|                        | E - Sufficient | مقبول               | 50 - 59 | Work meets minimum criteria           |
| Fail Group<br>(0 – 49) | FX – Fail      | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
|                        | F – Fail       | راسب                | (0-44)  | Considerable amount of work required  |
|                        |                |                     |         |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b>                                                      | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

| مخرجات التعلم للمادة الدراسية              | <p>3. Use various integration techniques to evaluate integrals.</p> <p>4. Evaluate integrals of rational functions by partial fractions.</p> <p>5. Define the basic concepts and techniques of integration of polynomial, rational, transcendental and trigonometric functions.</p> <p>6. Compute an anti-derivative using integration by parts.</p> <p>7. Describe a point on a graph using polar coordinates.</p> <p>8. Plot a point given its polar coordinates.</p> <p>9. Convert between polar and Cartesian coordinates.</p> <p>10. Find the distance between points in polar form.</p> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Strategies | <p>The most important strategies that will be adopted in delivering this module are:</p> <ul style="list-style-type: none"> <li>- Allow students to actively participate in the learning process with class discussions and exercises that support the initiative.</li> <li>- Incorporate flexible seating into my classroom</li> <li>- Knowledge application and Extended critical thinking</li> <li>- Do Summative assessments Occurs at end of chapter</li> <li>- Do Formative Assessment occurs through chapter to Covers complete content areas Case-Based Learning.</li> </ul> |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |

|--------------------------------|------------------|--------------------|-----------|---------------------------------------|
| Group                          | Grade            | التقدير            | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز             | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا            | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط              | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول              | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب(قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب               | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|            |                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Strategies | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                         | Time/Number | Weight (Marks) | Week Due       | Relevant Learning Outcome |
|----------------------|-------------------------|-------------|----------------|----------------|---------------------------|
| Formative assessment | Quizzes                 | 5           | 25% (25)       | 2, 4, 6, 12,14 | LO # 1, 3, 5, 10, 11      |
|                      | Online Assignments (HW) | 2           | 4% (4)         | 3, 13          | LO # 2, 9                 |

|                      |                    |      |                     |                 |                    |

| Week 1                                                     | Introduction - Difference between Circuit Theory and Field Theory |
| Week 2                                                     | Basics of Network Elements                                        |
| Week 3                                                     | Charge, Current and Voltage                                       |
| Week 4                                                     | Power and Energy                                                  |
| Week 5                                                     | Resistance and Resistivity and Ohm's Law                          |
| Week 6                                                     | Kirchhoff's Laws                                                  |
| Week 7                                                     | Series Resistors and Voltage Division                             |
| Week 8                                                     | Parallel Resistors and Current Division                           |
| Week 9                                                     | Midterm Exam 1                                                    |
| Week 10                                                    | Wye-Delta Transformations                                         |
| Week 11                                                    | Circuit Analysis - Nodal and Mesh                                 |

|         |                                 |
|---------|---------------------------------|
| Week 12 | Linearity and Superposition     |
| Week 13 | Source Transformations          |
| Week 14 | Thévenin and Norton Equivalents |
| Week 15 | Maximum Power Transfer          |
| Week 16 | Midterm Exam 2                  |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

| Week   | Material Covered                               |
|--------|------------------------------------------------|
| Week 1 | Lab 1: Equipment Familiarization               |
| Week 2 | Lab 2: Ohm's Law                               |
| Week 3 | Lab 3: Kirchhoff's Laws                        |
| Week 4 | Lab 4: Series Resistors and Voltage Division   |
| Week 5 | Lab 5: Parallel Resistors and Current Division |

### Grading Scheme

مخطط الدرجات

| Group | Grade | التقدير | Marks (%) | Definition |
|-------|-------|---------|-----------|------------|
|-------|-------|---------|-----------|------------|

|                             |                  |                    |          |                                       |
|-----------------------------|------------------|--------------------|----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز             | 90 - 100 | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا            | 80 - 89  | Above average with some errors        |
|                             | C - Good         | جيد                | 70 - 79  | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط              | 60 - 69  | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول              | 50 - 59  | Work meets minimum criteria           |
| Fail Group<br>(0 – 49)      | FX – Fail        | راسب(قيد المعالجة) | (45-49)  | More work required but credit awarded |
|                             | F – Fail         | راسب               | (0-44)   | Considerable amount of work required  |
|                             |                  |                    |          |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Module Approval

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Learning Outcomes</b></p> <p>مخرجات التعلم للمادة الدراسية</p> | <p>problems.</p> <p>By the end of successful completion of this course, the student will be able to:</p> <ol style="list-style-type: none"> <li>1. Define the structure of atoms in terms of the nucleus with protons, neutrons, &amp; electrons.</li> <li>2. Write and balance chemical equations, name inorganic compounds and ions and describe the properties of the main group elements.</li> <li>3. Carry out chemical calculations, including mass relations in chemical reactions, limiting reagent &amp; reaction yield calculations, and calculations of reactions taking place in solution.</li> <li>4. Understand the concept of oxidation-reduction, calculate oxidation numbers, and balance redox reactions.</li> <li>5. Apply the ideal gas law in solving problems involving the gas phase</li> <li>6. Solve problems in chemical thermodynamics and calorimetry.</li> <li>7. Predict the electronic structure of atoms and ions from quantum theory, and9) relate the position of an element in the periodic table to its electronic structure and to the physical and chemical properties of the elements.</li> <li>8. Describe the principles of chemical bonding and write Lewis structures.</li> <li>9. Predict the geometry of the electron pairs and the shape of molecules using VSEPR theory, predict bond polarity and molecular dipoles.</li> <li>10. Describe the valence bond theory, predict the hybridization of atoms in molecules, and describe bonding in molecules with single, double and triple bonds in terms of and <math>\pi</math> bonds, and delocalized molecular orbitals.</li> </ol> |
| <p><b>Indicative Contents</b></p> <p>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <p><u>Part A:</u></p> <ol style="list-style-type: none"> <li>1- Handling Numbers. Dimensional Analysis in Solving Problems Recognize chemical safety and hazardous materials icons</li> <li>2- Atomic Number. Mass Number. and isotopes. The Periodic Table. Molecules and Ions. Describe laboratory instruments and some basic techniques used in the chemistry laboratory, including balances and standard volumetric equipment</li> <li>3- Chemical Formulas. Naming Compounds. Atomic Mass. Avogadro's number and Molar Mass of an Element.</li> <li>4- Chemical Reactions and Chemical Equations.</li> <li>5- Describe how to Prepare accurate laboratory reports of their experimental results; Amounts of Reactants and Products; limiting Reagent Calculations; Reaction Yield; General Properties of Aqueous Solutions. Precipitation Reactions. Acid-Base</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Reactions; Oxidation-Reduction Reactions; Concentration of Solutions.

6- Acid-Base Titrations, Cases Pressure.

7- The ideal Gas Equation; Gas Stoichiometry; Partial Pressures; The Nature of Energy and types of energy

8- Energy Changes in Chemical Reactions; introduction to Thermodynamics. Enthalpy of Chemical Reactions; Calorimetry;

9- Standard Enthalpy of Formation and Reaction From Classical Physics to Quantum Theory; Bohr's Theory of the Hydrogen Atom; Quantum Numbers; Atomic Orbitals Electron Configuration;

10- Development of the Periodic Table; Periodic Classification of the Elements; Periodic Variation in Physical Properties;

Ionization Energy; Electron Affinity Lewis Dot Symbols; The ionic Bond; The Covalent Bond; Electro negativity; Writing Lewis structure Formal Charge and Lewis Structures.

11- The Concept of Resonance. Exceptions to the Octet Rule Bond Energy

12- Molecular Geometry; Dipole Moment; Spectrophotometric Analysis of tetracycline; Valence Bond Theory.

Hybridization of Atomic Orbital's. Hybridization in Molecules Containing Double and Triple Bonds. Delocalized Molecular Orbital's

Part B:

1- Types of analysis in analytical chemistry and their uses. Units for expressing concentration.

2- preparingsolutions,standardsolution,amounts of reactants and products.

3- Chemical equilibrium and reversible reactions,thermodynamics& chemical equilibrium

4- Equilibrium constants for chemical reactions.

5- Describe how to Prepare accurate laboratory reports of their experimental results

6- Equilibrium constants for chemical reactions

7- Electrochemistry, relationship between cell potential and the equilibrium constants relationship between  $\Delta G$ ,  $K$ , and  $E_{0cell}$  . the Nernst equation.

8- Volumetric analysis their uses and classification, titrimetric analysis calculations.

9-Acid-base titration

10- Precipitation titration

11- Complexometric titration

|  |                                                                                                                                                   |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>12- Oxidation-reduction titration</p> <p>13- Gravimetric analysis.</p> <p>14- Introduction and applications of industrial analysis method.</p> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب محسوب لـ ١٥ اسبوعا

|                                                                                |     |                                                                           |      |
|--------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعيا       | 5.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 47  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعيا | 3.13 |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |                         | Time/Number | Weight (Marks)  | Week Due         | Relevant Learning Outcome |
|-----------------------------|-------------------------|-------------|-----------------|------------------|---------------------------|
| <b>Formative assessment</b> | Quizzes                 | 5           | <b>25% (25)</b> | 2, 4, 6, 12, 14  | LO # 1, 2, 4, 8, 9        |
|                             | Online Assignments (HW) | 2           | <b>4% (4)</b>   | 5, 11            | LO # 3, 7                 |
|                             | Onsite Assignments      | 5           | <b>5% (5)</b>   | 3, 7, 10, 12, 13 | LO # 2, 3, 5, 8, 10       |

|                      |              |      |                     |          |              |
|----------------------|--------------|------|---------------------|----------|--------------|
|                      | Report       |      |                     |          |              |
|                      | Lab          | 3    | 6% (6)              | 2, 6, 11 | LO # 1, 4, 9 |
| Summative assessment | Midterm Exam | 2 hr | 10% (10)            | 9        | LO # 1 - 7   |
|                      | Final Exam   | 3 hr | 50% (50)            | 16       | LO # 1 - 10  |
| Total assessment     |              |      | 100%<br>(100 Marks) |          |              |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered                                    |
|---------|-----------------------------------------------------|
| Week 1  | Measurements in chemistry                           |
| Week 2  | Problem Solving in Chemistry - Dimensional Analysis |
| Week 3  | Atoms, Molecules and Ions                           |
| Week 4  | Mass Relationships in Chemical Reactions            |
| Week 5  | Reactions in Aqueous Solutions                      |
| Week 6  | Gasses and Thermochemistry                          |
| Week 7  | Quantum Theory and the Electronic Structur of Atoms |
| Week 8  | Chemical Bonding                                    |
| Week 9  | Electrochemistry                                    |
| Week 10 | Volumetric Methods of Analysis                      |
| Week 11 | Titration Based on Acid-Base Reactions              |
| Week 12 | Titration Based on Precipitation Reactions          |
| Week 13 | Titration Based on Complexation Reactions           |
| Week 14 | Titration Based on Redox reactions                  |
| Week 15 | Gravimetric Methods of Analysis                     |

|         |            |
|---------|------------|
| Week 16 | Final Exam |
|---------|------------|

### Delivery Plan (Weekly Lab. Syllabus)

#### المنهاج الاسبوعي للمختبر

|        | Material Covered                                                                                                                                                                                              |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 1 | Lab 1: Determine the concentration of the sodium hydroxide (NaOH) solution by titrating it with a standard solution of hydrochloric acid (HCl)                                                                |
| Week 2 | Lab 2: Determine the concentration of the acetic acid by titrating it with a standard solution of sodium hydroxide                                                                                            |
| Week 3 | Lab 3: Determine the concentration of the hydrochloric acid by titrating it with a standard solution of sodium carbonate (Na <sub>2</sub> CO <sub>3</sub> )                                                   |
| Week 4 | Lab 4: Determine the concentration of sodium carbonate (Na <sub>2</sub> CO <sub>3</sub> ) and sodium bicarbonate (NaHCO <sub>3</sub> ) in a mixture, titrating it with a standard hydrochloric acid solution. |
| Week 5 | Lab 5: Measurement of turbidity in a water sample with discussion                                                                                                                                             |
| Week 6 | Lab 6: Density Measurements                                                                                                                                                                                   |
| Week 7 | Lab 7: Viscosity Measurements                                                                                                                                                                                 |

### Learning and Teaching Resources

#### مصادر التعلم والتدريس

|                   | Text                                                              | Available in the Library? |
|-------------------|-------------------------------------------------------------------|---------------------------|
| Required Texts    | Introductory Chemistry Essentials, Nivaldo J. Tro                 | نعم                       |
| Recommended Texts | Chemistry. Steven S. Zumdahl, Susan A. Zumdahl, Donald J. DeCoste |                           |

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير            | Marks %  | Definition                            |
|-----------------------------|------------------|--------------------|----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز             | 90 - 100 | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا            | 80 - 89  | Above average with some errors        |
|                             | C - Good         | جيد                | 70 - 79  | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط              | 60 - 69  | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول              | 50 - 59  | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب(فيد المعالجة) | (45-49)  | More work required but credit awarded |
|                             | F – Fail         | راسب               | (0-44)   | Considerable amount of work required  |
|                             |                  |                    |          |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Module Approval

| Group                          | Grade            | التقدير            | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز             | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا            | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط              | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول              | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب(قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب               | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                         | Time/Number | Weight (Marks)      | Week Due        | Relevant Learning Outcome |
|----------------------|-------------------------|-------------|---------------------|-----------------|---------------------------|
| Formative assessment | Quizzes                 | 5           | 25% (25)            | 3,5,7, 11,13    | LO # 1, 2, 4, 9, 10       |
|                      | Online Assignments (HW) | 2           | 4% (4)              | 4, 12           | LO # 3, 11                |
|                      | Onsite Assignments      | 5           | 5% (5)              | 2, 6, 8, 10, 14 | LO # 5, 6,7, 8, 12        |
|                      | Report                  |             |                     |                 |                           |
|                      | Lab                     | 3           | 6% (6)              | 2, 6, 12        | LO # 1, 3, 10             |
| Summative assessment | Midterm Exam            | 2 hr        | 10% (10)            | 9               | LO # 1 - 7                |
|                      | Final Exam              | 3 hr        | 50% (50)            | 16              | LO # 1 - 12               |
| Total assessment     |                         |             | 100%<br>(100 Marks) |                 |                           |

| <b>Delivery Plan (Weekly Syllabus)</b><br>المنهاج الاسبوعي النظري |                                                                          |
|-------------------------------------------------------------------|--------------------------------------------------------------------------|
|                                                                   | <b>Material Covered</b>                                                  |
| <b>Week 1</b>                                                     | Fundamentals of Programming                                              |
| <b>Week 2</b>                                                     | Exploring FORTRAN Programming                                            |
| <b>Week 3</b>                                                     | Classifying Data using Data types in FORTRAN Programming                 |
| <b>Week 4</b>                                                     | Managing Input and Output Operations                                     |
| <b>Week 5</b>                                                     | Performing Mathematical and Logical functions: Operators and Expressions |
| <b>Week 6</b>                                                     | Controlling the Program Order: Decision Making                           |
| <b>Week 7</b>                                                     | Mid-term Exam                                                            |
| <b>Week 8</b>                                                     | Controlling the Program by using IF statements                           |
| <b>Week 9</b>                                                     | Repeating Sequence of Instructions: DO Loops                             |
| <b>Week 10</b>                                                    | Arrays and Matrices definition                                           |
| <b>Week 11</b>                                                    | Mathematical operation on Matrices                                       |
| <b>Week 12</b>                                                    | Internal and external functions in FORTRAN                               |
| <b>Week 13</b>                                                    | Subroutines in Fortran                                                   |
| <b>Week 14</b>                                                    | Numerical integration and area under the curve calculations              |
| <b>Week 15</b>                                                    | Numerical differentiation coding                                         |
| <b>Week 16</b>                                                    | Preparatory week before the final Exam                                   |

| <b>Delivery Plan (Weekly Lab. Syllabus)</b><br>المنهاج الاسبوعي للمختبر |                                                                             |

|--------------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                          | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b>                                                      | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, speaking interactive activities and by considering type of activities that are interesting to the students. |

### Grading Scheme

مخطط الدرجات

| Group                           | Grade                   | التقدير             | Marks (%) | Definition                            |
|---------------------------------|-------------------------|---------------------|-----------|---------------------------------------|
| <b>Success Group (50 - 100)</b> | <b>A</b> - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                 | <b>B</b> - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                 | <b>C</b> - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                 | <b>D</b> - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                 | <b>E</b> - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| <b>Fail Group (0 - 49)</b>      | <b>FX</b> - Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                 | <b>F</b> - Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

(35 hrs)</p> <p>Multiple Integrals, Double and Iterated Integrals over Rectangles, Double Integrals over General Regions, triple integrals in rectangular coordinates. (35 hrs)</p> <p>Revision problem classes (15hrs)</p> |

| <p><b>Learning and Teaching Strategies</b><br/>استراتيجيات التعلم والتعليم</p> |                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Strategies</b></p>                                                       | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b>                                                      | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

|                          |  |
|--------------------------|--|
| <p><b>Strategies</b></p> |  |
|--------------------------|--|

|  |                                                                                                                                                                                                                                                                                                                                                          |
|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | The main strategy is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students in the lab. |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                 |
|---------|--------------------------------------------------|
| Week 1  | Introduction and Basic Concepts                  |
| Week 2  | Systems and control volumes                      |
| Week 3  | Processes and cycles                             |
| Week 4  | Temperature and zeroth law of thermodynamics     |
| Week 5  | Forms of energy+ The first-law of thermodynamics |
| Week 6  | Energy conversion efficiency                     |
| Week 7  | Properties of pure substances                    |
| Week 8  | Property diagrams for phase-change processes     |
| Week 9  | Property tables                                  |
| Week 10 | The ideal-gas equation of state                  |
| Week 11 | The second-law of thermodynamics                 |
| Week 12 | Thermal Energy Reservoirs                        |
| Week 13 | Heat Engines                                     |
| Week 14 | Refrigerators and heat pumps                     |
| Week 15 | Reversible and irreversible processes            |
| Week 16 | Preparatory week before the final Exam           |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                                |
|--------|-------------------------------------------------|
| Week 1 | Lab 1: Temperature measurement                  |
| Week 2 | Lab 2: Temperature measurement                  |
| Week 3 | Lab 3: Pressure volume relationship             |
| Week 4 | Lab 4: Pressure volume relationship             |
| Week 5 | Lab 5: Temperature-volume-pressure relationship |
| Week 6 | Lab 6: Temperature-volume-pressure relationship |
| Week 7 | Lab 7: Temperature-volume-pressure relationship |

### Learning and Teaching Resources

#### مصادر التعلم والتدريس

|                          | Text                                                                           | Available in the Library? |
|--------------------------|--------------------------------------------------------------------------------|---------------------------|
| <b>Required Texts</b>    | YUNUS A. CENGEL and MICHAEL A. BOLES" Thermodynamics an Engineering Approach". | Yes                       |
| <b>Recommended Texts</b> | SONNTAG, BORGNAKKE and VAN WYLEN" Fundamental of Thermodynamics".              | No                        |
| <b>Websites</b>          |                                                                                |                           |

### Grading Scheme

#### مخطط الدرجات

| Group                               | Grade                   | التقدير             | Marks (%) | Definition                            |
|-------------------------------------|-------------------------|---------------------|-----------|---------------------------------------|
| <b>Success Group<br/>(50 - 100)</b> | <b>A</b> - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                     | <b>B</b> - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                     | <b>C</b> - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                     | <b>D</b> - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                     | <b>E</b> - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| <b>Fail Group<br/>(0 - 49)</b>      | <b>FX</b> – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                     | <b>F</b> – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                                     |                         |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <p>Students who successfully complete the course should:</p> <ol style="list-style-type: none"> <li>1. Know and comprehend the definitions of fundamental concepts of Fluid Mechanics.</li> <li>2. Understand and apply the physical properties of Fluid including: continuum, density, specific weight, viscosity, surface tension and capillary effect.</li> <li>3. Understand the basic equations of static fluid and derive the equation of pressure distribution for incompressible fluids.</li> <li>4. Understand and demonstrate the application point of hydrostatic forces on submerged planar and curved surfaces, manometers and fluids in rigid-body motion.</li> <li>5. Understand the main concepts of system and control volume and their applications (conservation laws), and describe the principles of motion for fluids.</li> <li>6. Understand and identify how to derive basic equations and know the related assumptions and apply the equation of the conservation of mass, the equation of the conservation of momentum.</li> <li>7. Understand the equation of the conservation of energy and Bernoulli equation, and identify transfer and extract of mechanical energy and solve their relevant problems that contain pumps and turbines.</li> <li>8. Understand the concepts of dimensional analysis and apply The Buckingham Pi-Theorem, and derive the dimensionless numbers.</li> <li>9. Know and apply the similarity concept and set up the relation between a model and a prototype.</li> </ol> |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <p><b>Introductory Concepts of Fluid Mechanics:</b> This chapter covers the basic criteria of the concept of a fluid, the fluid as a continuum, dimensions and units, as well as fluid properties including density, specific weight, specific volume, specific gravity, viscosity, surface tension and capillarity.</p> <p><b>Pressure Distribution in a Fluid statics:</b> This chapter deals with fluid pressure at a point, variation of pressure within a static fluid, hydrostatic law-Pressure head, Pascal's law, as well as measurement of pressure: piezometric tube, manometer. In addition, this chapter addresses Hydrostatic pressure</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>distributions, hydrostatic forces on plane surfaces, hydrostatic forces on curved surfaces, pressure distribution in rigid-body motion.</p> <p><b>Fluid Flow Concepts:</b> This chapter presents the main concepts of system and control volume and conservation laws (mass, Bernoulli, momentum), mass and volume flow rates, and the derivation of Bernoulli equation.</p> <p><b>Dimensional Analysis and Modeling:</b> In this dimensional analysis chapter, dimensions, dimensional homogeneity, methods of dimensional analysis-Buckingham Pi theorem are presented. Moreover, model analysis (advantages and applications of model testing), similitude, derivations of important dimensionless numbers that relevant with fluid mechanics.</p> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                         | Time/Number | Weight (Marks)      | Week Due    | Relevant Learning Outcome |
|----------------------|-------------------------|-------------|---------------------|-------------|---------------------------|
| Formative assessment | Quizzes                 | 5           | 25% (25)            | 2,5,7,11,13 | LO # 1,4,5,8,9            |
|                      | Online Assignments (HW) | 2           | 4% (4)              | 3,10        | LO # 3,6                  |
|                      | Onsite Assignments      | 5           | 5% (5)              | 2,6,8,12,14 | LO #1,5,7,8,9             |
|                      | Report                  |             |                     |             |                           |
|                      | Lab                     | 3           | 6% (6)              | Continuous  | LO #1,2,3,4               |
| Summative assessment | Midterm Exam            | 2 hr        | 10% (10)            | 9           | LO # 1-6                  |
|                      | Final Exam              | 3 hr        | 50% (50)            | 16          | All                       |
| Total assessment     |                         |             | 100%<br>(100 Marks) |             |                           |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered                                                        |
|---------|-------------------------------------------------------------------------|
| Week 1  | Introductory Concepts of Fluid Mechanics                                |
| Week 2  | Thermodynamic Properties of Fluid                                       |
| Week 3  | Surface Tension and Capillary Effect                                    |
| Week 4  | Pressure Distribution in a Fluid                                        |
| Week 5  | Pressure Measurements                                                   |
| Week 6  | Hydrostatic Forces on Submerged Plane Surfaces                          |
| Week 7  | Hydrostatic forces on submerged curved surfaces                         |
| Week 8  | Fluids in rigid-body motion and Rotation in a Cylindrical Container     |
| Week 9  | Fluid Flow Concepts (Definitions and Concepts)                          |
| Week 10 | System and control volume of Fluid Flow                                 |
| Week 11 | The Bernoulli equation                                                  |
| Week 12 | Applications of Bernoulli equation and mechanical energy and efficiency |
| Week 13 | Dimensional analysis and similarity                                     |
| Week 14 | Buckingham theorem                                                      |
| Week 15 | Physical Modeling (Geometric, Kinematic and Dynamic Similarities)       |
| Week 16 | Final Exams                                                             |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|         | Material Covered                    |
|---------|-------------------------------------|
| Week 1  | Lab 1: Calibration of Bourdon Gauge |
| Week 2  | Lab 1: Calibration of Bourdon Gauge |
| Week 3  | Lab 1: Calibration of Bourdon Gauge |
| Week 4  | Lab 2: Center of Pressure           |
| Week 5  | Lab 2: Center of Pressure           |
| Week 6  | Lab 2: Center of Pressure           |
| Week 7  | Lab 3: Stability of a Floating Body |
| Week 8  | Lab 3: Stability of a Floating Body |
| Week 9  | Lab 3: Stability of a Floating Body |
| Week 10 | Lab 4: Flow through Venturi Meter   |
| Week 11 | Lab 4: Flow through Venturi Meter   |
| Week 12 | Lab 4: Flow through Venturi Meter   |

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. Calculate stresses on a member subjected to axial loads</li> <li>2. Calculate stresses of a member subjected to shear force</li> <li>3. Explain and compute the mechanical properties of materials.</li> <li>4. Calculate angular rotation of a shaft subjected to torsional moment.</li> <li>5. Compute forces, stresses, and bending moments in loaded beams.</li> <li>6. Evaluate combined stresses and draw Mohr's stress circle.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. Understand the effect of direct (tension or compression) force on mechanical parts.</li> <li>2. Analyze the stress-strain curve of any materials and compute some mechanical properties from this curve.</li> <li>3. Understand the effect shear force on mechanical parts and the difference between direct and shear forces.</li> <li>4. Evaluate the thermal stresses of mechanical structures.</li> <li>5. Drawing the shear force and bending moment diagram of beams subjected to these types of loads.</li> <li>6. Determine the stresses within beams which subjected to shear force and bending moment loads.</li> <li>7. Evaluate the shear stress result from bending on beams.</li> <li>8. Analyze the effect of torsion stress on circular parts.</li> <li>9. Recognize the difference between direct shear and torsion.</li> <li>10. Draw Mohr's stress circle and compute combine stresses in different type of loading.</li> <li>11. Evaluate the maximum stresses due to combined stresses.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <ol style="list-style-type: none"> <li>1. Introduction to Strengths of Materials/Statics Review: this chapter includes a quick review of principles of equilibrium equations that helps determining the reaction forces, also contains different types of forces such as normal and shear force.</li> <li>2. Simple stresses and strains: this chapter contains simple stress in tension and compression, extension of bars which are subjected to direct and shear stresses.</li> <li>3. Compound beams: this chapter deals with any engineering structure includes bars or tubes with different materials types. Also, thermal stresses and strains are included in this chapter.</li> <li>4. Bending moments and shearing forces diagrams: different types of loading on different types of beam will be discussed in this topic. This helps to draw the shear forces and bending moment diagrams of these types of beams which consider the basic knowledge to know the type of stress within these beams.</li> <li>5. Bending stresses in beams: this topic deals with bending stress of different types of beam that are subjected to bending load results from different types of loads such as concentrated loads and uniformly distributed loads.</li> <li>6. Torsion: this topic will discuss any engineering structure that is subjected to torque and lead to shear stress.</li> <li>7. Shear stresses in beams: this chapter will make the students recognize the difference between shear stress due to direct shear force and shear stress due to bending.</li> <li>8. Combined stresses: this chapter will conduct the principal stresses and maximum shear stresses due to combined stresses such as torsion with bending or hoop stress with torsion and so on.</li> </ol> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to:                                                                                                                                                                                                                                                                                               |
|                   | <ol style="list-style-type: none"> <li>3. Encourage students' participation in the exercises</li> <li>4. Refining and expanding their critical thinking skills.</li> </ol> <p>This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 22  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 1.47 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 100 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |                         | Time/Number | Weight (Marks)      | Week Due    | Relevant Learning Outcome |
|-----------------------------|-------------------------|-------------|---------------------|-------------|---------------------------|
| <b>Formative assessment</b> | Quizzes                 | 5           | 25% (25)            | 3,5,7,11,13 | LO # 2,4,6,9,11           |
|                             | Online Assignments (HW) | 2           | 4% (4)              | 6,12        | LO # 4, 5, 6,10.          |
|                             | Onsite Assignments      | 5           | 5% (5)              | 2,4,6,10,12 | LO # 1,3,5,9,11           |
|                             | Report                  |             |                     |             |                           |
|                             | Lab                     | 3           | 6% (6)              | Continuous  | LO #1,2,3,7,8             |
| <b>Summative assessment</b> | Midterm Exam            | 2 hr        | 10% (10)            | 9           | LO # 1-6                  |
|                             | Final Exam              | 3 hr        | 50% (50)            | 16          | All                       |
| <b>Total assessment</b>     |                         |             | 100%<br>(100 Marks) |             |                           |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered                                      |
|---------|-------------------------------------------------------|
| Week 1  | Introduction to Strengths of Materials/Statics Review |
| Week 2  | Introduction to Strengths of Materials/Statics Review |
| Week 3  | Introduction to Strengths of Materials/Statics Review |
| Week 4  | Simple stresses and strains                           |
| Week 5  | Simple stresses and strains                           |
| Week 6  | Bending moments and shearing forces                   |
| Week 7  | Bending moments and shearing forces                   |
| Week 8  | Bending moments and shearing forces                   |
| Week 9  | Bending stresses in beams                             |
| Week 10 | Bending stresses in beams                             |
| Week 11 | Bending stresses in beams                             |
| Week 12 | Shear stress in beams                                 |
| Week 13 | Shear stress in beams                                 |
| Week 14 | Torsion                                               |
| Week 15 | Torsion                                               |
| Week 16 | Final Exams                                           |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                          |
|--------|-------------------------------------------|
| Week 1 | Lab 1: reactions of simply supported beam |
| Week 2 | Lab 1: reactions of simply supported beam |
| Week 3 | Lab 1: reactions of simply supported beam |
| Week 4 | Lab 2: Tension test                       |
| Week 5 | Lab 2: Tension test                       |

| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX - Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F - Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn how to identify the fastening of different mechanical parts by using various methods. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                |
|---------|-------------------------------------------------|
| Week 1  | Introduction to mechanical drawing              |
| Week 2  | Representation of solid design- Sectional views |
| Week 3  | Representation of solid design- Sectional views |
| Week 4  | Nuts, bolts, screws                             |
| Week 5  | Nuts, bolts, screws                             |
| Week 6  | Keys and keyways                                |
| Week 7  | Welding and welding symbols                     |
| Week 8  | Welding and welding symbols                     |
| Week 9  | Welding and welding symbols                     |
| Week 10 | Tolerancing dimensions and fits                 |
| Week 11 | Tolerancing dimensions and fits                 |
| Week 12 | Gears                                           |
| Week 13 | assembly drawing                                |
| Week 14 | assembly drawing                                |
| Week 15 | assembly drawing                                |
| Week 16 | Preparatory week before the final Exam          |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                            |
|--------|---------------------------------------------|
| Week 1 | Learning of principle of solidworks drawing |
| Week 2 | Learning of principle of solidworks drawing |
| Week 3 | Learning of principle of solidworks drawing |
| Week 4 | Learning of principle of solidworks drawing |
| Week 5 | Learning of 2D drawing by solidworks        |
| Week 6 | Learning of 2D drawing by solidworks        |
| Week 7 | Learning of 2D drawing by solidworks        |
| Week 8 | Learning of 2D drawing by solidworks        |
| Week 9 | Learning of 3D drawing by solidworks.       |

|         |                                         |
|---------|-----------------------------------------|
| Week 10 | Learning of 3D drawing by solidworks.   |
| Week 11 | Learning of 3D drawing by solidworks.   |
| Week 12 | Learning assembly drawing by solidworks |
| Week 13 | Learning assembly drawing by solidworks |
| Week 14 | Learning assembly drawing by solidworks |
| Week 15 | Learning assembly drawing by solidworks |

### Learning and Teaching Resources

#### مصادر التعلم والتدريس

|                   | Text                                                                                                                                                   | Available in the Library? |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Required Texts    | الرسم الهندسي عبدالرسول الخفاف                                                                                                                         | Yes                       |
| Recommended Texts | 1. Colin H Simmons, Manual of Engineering Drawing Second edition.<br>2. Dr. K.L. Narayana, Dr. P. Kannaiah and K. Venkata Reddy, Machine drawing Third | Yes                       |

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Module Approval

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54). The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| Week 9  | <ul style="list-style-type: none"> <li>- Environmental crimes of the Baath regime in Iraq.</li> <li>- Military and radioactive contamination and mine explosions</li> </ul>                                                                                                                                                                      |
| Week 10 | <ul style="list-style-type: none"> <li>- Destruction of cities and villages (scorched earth policy)</li> </ul>                                                                                                                                                                                                                                   |
| Week 11 | <ul style="list-style-type: none"> <li>- Drying the marshes</li> <li>- Demolishing palm groves, trees and crops</li> </ul>                                                                                                                                                                                                                       |
| Week 12 | <ul style="list-style-type: none"> <li>- Mass grave crimes</li> <li>- Incidents of genocide graves committed by the Baathist regime in Iraq</li> </ul>                                                                                                                                                                                           |
| Week 13 | <ul style="list-style-type: none"> <li>- Chronological classification of genocide graves in Iraq for the period 1963 AD - 2003 AD.</li> </ul>                                                                                                                                                                                                    |

|         |                                                                                             |
|---------|---------------------------------------------------------------------------------------------|
| Week 14 | - Chronological classification of genocide graves in Iraq for the period 1963 AD - 2003 AD. |
| Week 15 | Exam 2                                                                                      |
| Week 16 | Preparatory week before the final Exam                                                      |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |
|--------|------------------|
| Week 1 |                  |
| Week 2 |                  |
| Week 3 |                  |
| Week 4 |                  |
| Week 5 |                  |
| Week 6 |                  |
| Week 7 |                  |

### Learning and Teaching Resources

مصادر التعلم والتدريس

|                   | Text           | Available in the Library? |
|-------------------|----------------|---------------------------|
| Required Texts    | Lectures Notes | Yes                       |
| Recommended Texts |                |                           |
| Websites          |                |                           |

### Grading Scheme

مخطط الدرجات

| Group         | Grade         | التقدير | Marks (%) | Definition              |
|---------------|---------------|---------|-----------|-------------------------|
| Success Group | A - Excellent | امتياز  | 90 - 100  | Outstanding Performance |

|                        |                  |                     |         |                                       |
|------------------------|------------------|---------------------|---------|---------------------------------------|
| (50 - 100)             | B - Very Good    | جيد جدا             | 80 - 89 | Above average with some errors        |
|                        | C - Good         | جيد                 | 70 - 79 | Sound work with notable errors        |
|                        | D - Satisfactory | متوسط               | 60 - 69 | Fair but with major shortcomings      |
|                        | E - Sufficient   | مقبول               | 50 - 59 | Work meets minimum criteria           |
| Fail Group<br>(0 – 49) | FX – Fail        | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
|                        | F – Fail         | راسب                | (0-44)  | Considerable amount of work required  |
|                        |                  |                     |         |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. Study the formation of Differential equation from the given physical problems and to solve first order ordinary differential equation by various methods.</li> <li>2. Study the Laplace, transformation, and its properties.</li> <li>3. Study the Fourier series representation of a function of one variable and to find half-range Fourier series for even/odd functions.</li> <li>4. Apply Green's Theorem, Stokes' Theorem, and the Divergence Theorem).</li> <li>5. Study the convergence and divergence of infinite series and evaluate successive differentiation.</li> </ol>                                                                                                                                                                                                                                                           |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. To understand the formation of Differential equation from the given physical problems and to solve first order ordinary differential equation by various methods.</li> <li>2. To be able to apply the knowledge of first order ordinary differential equation in different engineering applications.</li> <li>3. To find the Fourier series representation of a function of one variable and to find half-range Fourier series for even/odd functions.</li> <li>4. To understand the Laplace, transform and its properties.</li> <li>5. Apply the Laplace transform to solve differential equations.</li> <li>6. To understand the convergence and divergence of infinite series and to evaluate successive differentiation.</li> <li>7. be able to understand and use Green's Theorem, Stokes' Theorem, and the Divergence Theorem.</li> </ol> |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <p>Solutions of Homogeneous and Inhomogeneous Linear D.E with constant coefficients (25 hrs)</p> <p>Elimination of dependent variables by differentiation and by using operator equation (25 hrs)</p> <p>Concept of Periodic functions, Trigonometric series, Bounds of a Function, Continuity of a Function, Euler Coefficients (25 hrs)</p> <p>Properties and Inverse of Laplace Transforms, Solution of Ordinary and Simultaneous Linear D. E's by Laplace transforms (25 hrs)</p> <p>Green's Theorem in the Plane, Stokes' Theorem, The Divergence Theorem, and a Unified Theory (25 hrs)</p> <p>Revision problem classes (6 hrs)</p>                                                                                                                                                                                               |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|-----|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 63  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 4.2 |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 87  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 5.8 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 150 |                                                                            |     |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |                         | Time/Number | Weight (Marks)                    | Week Due     | Relevant Learning Outcome |
|-----------------------------|-------------------------|-------------|-----------------------------------|--------------|---------------------------|
| <b>Formative assessment</b> | Quizzes                 | 5           | <b>25% (25)</b>                   | 2,4,5, 10,12 | LO #1, 3, 4,6 and 7       |
|                             | Online Assignments (HW) | 3           | <b>6% (6)</b>                     | 3,6, 11      | LO # 2, 5 and 7           |
|                             | Onsite Assignments      | 3           | <b>5% (5)</b>                     | 3,8,13       | LO #3,6,7                 |
|                             | Report                  | 1           | <b>4% (4)</b>                     | 14           | LO #7                     |
|                             | Lab                     |             |                                   |              |                           |
| <b>Summative assessment</b> | Midterm Exam            | 2 hr        | <b>10% (10)</b>                   | 9            | LO # 1-5                  |
|                             | Final Exam              | 3 hr        | <b>50% (50)</b>                   | 16           | All                       |
| <b>Total assessment</b>     |                         |             | <b>100%</b><br><b>(100 Marks)</b> |              |                           |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered                                                                                                                  |
|---------|-----------------------------------------------------------------------------------------------------------------------------------|
| Week 1  | First-Order Differential Equations: Initial-value problem. Separable variables.                                                   |
| Week 2  | Homogeneous equations. Exact equations. Linear equations.                                                                         |
| Week 3  | Second-Order Differential Equations: Initial-value and Boundary-value problems.                                                   |
| Week 4  | Linear differential operators. Reduction of order. Homogeneous equations with constant coefficients.                              |
| Week 5  | Non-homogeneous equations. Method of undetermined coefficients. Method of variation of parameters.                                |
| Week 6  | Some nonlinear equations. Applications. Higher order Differential Equations.                                                      |
| Week 7  | Higher order Differential Equations                                                                                               |
| Week 8  | Simultaneous Linear Differential Equations                                                                                        |
| Week 9  | Fourier series solutions.                                                                                                         |
| Week 10 | Euler Coefficients, Even and Odd Functions, Half Range Expansion, Applications problems.                                          |
| Week 11 | Laplace Transforms                                                                                                                |
| Week 12 | Application of Linear Algebra. Homogeneous linear systems. Non-homogeneous linear systems. Solving systems by Laplace transforms. |
| Week 13 | Series Solutions: Cauchy- Euler equation method. Solutions about ordinary points. Solutions about singular points.                |
| Week 14 | Method of Frobenius. Second Solutions and Logarithm terms.                                                                        |
| Week 15 | First-Order Differential Equations: Initial-value problem. Separable variables.                                                   |
| Week 16 | The Final Exam                                                                                                                    |

### Learning and Teaching Resources

#### مصادر التعلم والتدريس

|                   | Text                                                                                                                                                                                                                          | Available in the Library? |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Required Texts    | Thomas' Calculus Early Transcendentals 12th Edition. by George B.                                                                                                                                                             | Yes                       |
| Recommended Texts | Calculus, by H. Anton, I. Bivens, and S. Davis, 8th Edition, 2002, Wiley                                                                                                                                                      | No                        |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 63  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 4.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 37  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 2.47 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 100 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|  | Time/Number | Weight (Marks) | Week Due | Relevant Learning |
|--|-------------|----------------|----------|-------------------|
|--|-------------|----------------|----------|-------------------|

|                      |                         |      |                     |             | Outcome        |
|----------------------|-------------------------|------|---------------------|-------------|----------------|
| Formative assessment | Quizzes                 | 5    | 25% (25)            | 2,5,7,11,13 | LO # 1,4,5,8,9 |
|                      | Online Assignments (HW) | 2    | 4% (4)              | 3,10        | LO # 3,6       |
|                      | Onsite Assignments      | 5    | 5% (5)              | 2,6,8,12,14 | LO #1,5,7,8,9  |
|                      | Report                  |      |                     |             |                |
|                      | Lab                     | 3    | 6% (6)              | Continuous  | LO #1,2,3,4    |
| Summative assessment | Midterm Exam            | 2 hr | 10% (10)            | 9           | LO # 1-6       |
|                      | Final Exam              | 3 hr | 50% (50)            | 16          | All            |
| Total assessment     |                         |      | 100%<br>(100 Marks) |             |                |

| Delivery Plan (Weekly Syllabus) |                                                                |
|---------------------------------|----------------------------------------------------------------|
| المنهاج الاسبوعي النظري         |                                                                |
|                                 | Material Covered                                               |
| Week 1                          | Laminar flow in pipes                                          |
| Week 2                          | Analysis of Laminar flow in pipes                              |
| Week 3                          | Pressure drop and head loss of laminar flow                    |
| Week 4                          | Turbulent flow in pipes                                        |
| Week 5                          | Analysis of Turbulent flow in pipes                            |
| Week 6                          | The Colebrook equation and the Moody Chart of friction factor  |
| Week 7                          | Types of fluid flow problems                                   |
| Week 8                          | Piping Networks with Pumps and Turbines                        |
| Week 9                          | The efficiency of the pump–motor combination                   |
| Week 10                         | Flow rate and velocity measurements                            |
| Week 11                         | Pitot-static tubes and its applications                        |
| Week 12                         | Obstruction flowmeters: Orifice, Venturi, and Nozzle meters    |
| Week 13                         | The concepts of turbomachinery-Pumps                           |
| Week 14                         | Classification of pumps                                        |
| Week 15                         | Pump Performance Curves and Matching a Pump to a Piping System |
| Week 16                         | Final Exams                                                    |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|         | Material Covered                     |
|---------|--------------------------------------|
| Week 1  | Lab 1: Flow Types in Pipes           |
| Week 2  | Lab 1: Flow Types in Pipes           |
| Week 3  | Lab 1: Flow Types in Pipes           |
| Week 4  | Lab 2: Frictional Losses in Pipes    |
| Week 5  | Lab 2: Frictional Losses in Pipes    |
| Week 6  | Lab 2: Frictional Losses in Pipes    |
| Week 7  | Lab 3: Minor Losses in piping system |
| Week 8  | Lab 3: Minor Losses in piping system |
| Week 9  | Lab 3: Minor Losses in piping system |
| Week 10 | Lab 4: The test of pumps             |
| Week 11 | Lab 4: The test of pumps             |
| Week 12 | Lab 4: The test of pumps             |

### Learning and Teaching Resources

مصادر التعلم والتدريس

### Grading Scheme مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54). The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Module Approval المصادقة على وصف المادة الدراسية

|                                         | Name | Date     | Signature |
|-----------------------------------------|------|----------|-----------|
| Module Leader Approval                  |      | 8/6/2023 |           |
| Peer Reviewer Approval                  |      | 8/6/2023 |           |

Draw shear force and bending moment diagrams for indeterminate beam using Macaulay's method.</li> <li>3. Conduct the deflection of indeterminate beams under different loads.</li> <li>4. Determine the stresses and strains in thin cylinders subjected internal pressure.</li> <li>5. Determine the stresses and strains in thick cylinders subjected internal pressure.</li> <li>6. Recognize the difference between thin and thick cylinders under same loading.</li> <li>7. Design simple bars, beams, and circular shafts for allowable stresses and loads by determine the factor of safety.</li> <li>8. Analyze slender, long columns subjected to axial loads.</li> <li>9. Analyze the deflection of different type of loading (Tension, compression, bending, impact) using Castigliano's theorem.</li> <li>10. Recognize the difference in failure between ductile and brittle materials.</li> </ol>                                                                                                                                                      |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <ol style="list-style-type: none"> <li>1. Deflection of determinate beams: the deflection of determinate beams under different loads such as concentrated, uniformly distributed load and increasing loads will be discussed in this chapter.</li> <li>2. Deflection of indeterminate beams: this chapter determine the shear force and bending moment diagram for indeterminate beams which cannot be solved by equilibrium equations and the deflection of these beams also will be calculated.</li> <li>3. Thin cylinders: All types of stresses within thin cylinders and spheres under internal pressure will be calculated within this chapter. Moreover, the change in dimensions such as change in diameter, length, and volume will be conducted.</li> <li>4. Thick cylinders: same previous chapter but for thick cylinders. Combined cylinders also will be introduced to show the effect of interface pressure on the stresses on both inner and outer cylinders.</li> <li>5. Buckling: in this chapter, the critical buckling load will be evaluated under different types of end conditions such as: pin-pin, pin-fixed, fixed-fixed,</li> </ol> |

| Total assessment     |                         |      | 100%<br>(100 Marks) |             |                 |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                       |
|---------|----------------------------------------|
| Week 1  | Deflection of <b>determinate</b> beams |
| Week 2  | Deflection of <b>determinate</b> beams |
| Week 3  | <b>Indeterminate</b> beams             |
| Week 4  | <b>Indeterminate</b> beams             |
| Week 5  | <b>Thin cylinders</b>                  |
| Week 6  | <b>Thin cylinders</b>                  |
| Week 7  | <b>Thick cylinders</b>                 |
| Week 8  | <b>Thick cylinders</b>                 |
| Week 9  | <b>Buckling</b>                        |
| Week 10 | <b>Buckling</b>                        |
| Week 11 | <b>Strain energy</b>                   |
| Week 12 | <b>Strain energy</b>                   |
| Week 13 | <b>Strain energy</b>                   |
| Week 14 | <b>Failure theories</b>                |
| Week 15 | <b>Failure theories</b>                |
| Week 16 | <b>Final Exams</b>                     |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|         | Material Covered                            |
|---------|---------------------------------------------|
| Week 1  | Lab 1: deflection of simply supported beams |
| Week 2  | Lab 2: deflection of simply supported beams |
| Week 3  | Lab 3: deflection of simply supported beams |
| Week 4  | Lab 4: :deflection of indeterminate beams   |
| Week 5  | Lab 5: :deflection of indeterminate beams   |
| Week 6  | Lab 6: :deflection of indeterminate beams   |
| Week 7  | Lab 7: :Buckling                            |
| Week 8  | Lab 8: :Buckling                            |
| Week 9  | Lab 9: :Buckling                            |
| Week 10 | Lab 10: Creep Test                          |
| Week 11 | Lab 11: Creep Test                          |
| Week 12 | Lab 12: Creep Test                          |

### Learning and Teaching Resources

مصادر التعلم والتدريس

|                   | Text                                                                | Available in the Library? |
|-------------------|---------------------------------------------------------------------|---------------------------|
| Required Texts    | E.J. Hearn, strength of materials. Third edition.1997               | Yes                       |
| Recommended Texts | R.C. Hibbeler, Mechanics of Materials, Prentice Hall, 7th ed., 2007 | No                        |
| Websites          |                                                                     |                           |

### Grading Scheme

مخطط الدرجات

| Group | Grade | التقدير | Marks (%) | Definition |
|-------|-------|---------|-----------|------------|
|-------|-------|---------|-----------|------------|

|                                     |                        |                     |          |                                       |
|-------------------------------------|------------------------|---------------------|----------|---------------------------------------|
| <b>Success Group<br/>(50 - 100)</b> | <b>A</b> –Excellent    | امتياز              | 90 - 100 | Outstanding Performance               |
|                                     | <b>B</b> - Very Good   | جيد جدا             | 80 - 89  | Above average with some errors        |
|                                     | <b>C</b> –Good         | جيد                 | 70 - 79  | Sound work with notable errors        |
|                                     | <b>D</b> –Satisfactory | متوسط               | 60 - 69  | Fair but with major shortcomings      |
|                                     | <b>E</b> –Sufficient   | مقبول               | 50 - 59  | Work meets minimum criteria           |
| <b>Fail Group<br/>(0 – 49)</b>      | <b>FX</b> – Fail       | راسب (قيد المعالجة) | (45-49)  | More work required but credit awarded |
|                                     | <b>F</b> – Fail        | راسب                | (0-44)   | Considerable amount of work required  |
|                                     |                        |                     |          |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

|  | students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn how to identify the chemical composition, structure and properties of metallic and the properties of metallic materials according to their applications. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

| Week 15 | Heat Treatment                                  |
| Week 16 | Preparatory week before the final Exam          |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|            | Material Covered                                                                                                    |
|------------|---------------------------------------------------------------------------------------------------------------------|
| Week 1-4   | Learn the correct steps to prepare a sample for microscopy                                                          |
| Week 5-8   | Learn the correct steps to check the hardness of metals                                                             |
| Week 9-12  | Studying the effect of increasing the percentage of carbon on the mechanical properties and microstructure of steel |
| Week 13-15 | Studying the effect of heat treatments on the mechanical properties and microstructure of steel                     |

| <p><b>Strategies</b></p> | <p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                                 |
|---------|----------------------------------------------------------------------------------|
| Week 1  | DC machines construction.                                                        |
| Week 2  | Principle of operation of DC generators                                          |
| Week 3  | Types of DC generators                                                           |
| Week 4  | Losses and efficiency of DC generators + <b>(Monthly Exam 1)</b>                 |
| Week 5  | Parallel operation of DC generators                                              |
| Week 6  | Principle of DC motors                                                           |
| Week 7  | Types of DC motors                                                               |
| Week 8  | DC motors losses, efficiency                                                     |
| Week 9  | Speed control of DC motors                                                       |
| Week 10 | Transformer construction + <b>(Monthly Exam 2)</b>                               |
| Week 11 | principle of operation of transformer                                            |
| Week 12 | Types of transformers ordinary, all-day, and auto                                |
| Week 13 | Transformer Losses and efficiencies                                              |
| Week 14 | The basic principles of electrical power transmission. + <b>(Monthly Exam 3)</b> |
| Week 15 | The basic principles of electrical power transmission                            |
| Week 16 | Preparatory week before the final Exam                                           |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                                     |
|--------|------------------------------------------------------|
| Week 1 | The construction of DC machines.                     |
| Week 2 | Building-up voltage of self-excited shunt generator. |
| Week 3 | Speed control of a DC shunt motor.                   |
| Week 4 | Operation of single phase transformer                |

|--------------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                          | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                                |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, speaking interactive activities and by considering type of activities that are interesting to the students. |

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <p>This course presents an overview of fundamental computer science topics. Overview topics include an introduction to computer components, computer hardware, operating systems, digitization of data, and application program (Microsoft office).</p>                                                                                                                                                                                                               |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <p>6. Analyze, design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.<br/>7. Identify problems and formulate solutions for systems.<br/>8. Communicate effectively with a range of audience.<br/>9. Work effectively as part of a team to develop and deliver quality software artifacts.<br/>10. Design solutions using approaches that integrate ethical, social, legal, and economic responsibilities.</p> |

| Week 16 | <b>Final Exam</b>                     |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                           |
|--------|--------------------------------------------|
| Week 1 | Lab 1: Introduction of Microsoft Excel     |
| Week 2 | Lab 2: File and Home Tab                   |
| Week 3 | Lab 3: Insert and Layout Tab               |
| Week 4 | Lab 4: Formulas in Microsoft Excel         |
| Week 5 | Lab 5: Data Tab                            |
| Week 6 | Lab 6: Browsing and Searching the Internet |
| Week 7 | Lab 7: E-mail and E-Chatting               |

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. Understand the differentiation between a random process and a deterministic process.</li> <li>2. Solve probability problems and its applications by to determine the sampled data; analyze it graphically.</li> <li>3. Understand the relationship between both discrete and continuous random variables.</li> <li>4. Understand the theoretical of the normal distribution with many populations in practice.</li> <li>5. Learn statistical hypotheses by carrying statistical tests, using different significance levels.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <p>On completion of this course, the student should be able to:</p> <ol style="list-style-type: none"> <li>1. Use a number of methods and techniques for collecting and presentation the sets of data.</li> <li>2. Calculation and demonstration the center tendency and variation of data.</li> <li>3. compute the probabilities in a simple cases and using the rules of probability in computing;</li> <li>4. give an account of the concept random variable and be able to use some common probability distributions;</li> <li>5. understand the meaning of the central limit theorem;</li> <li>6. use point and interval estimates for some typical statistical problems;</li> <li>7. Apply elementary regression for fitting measured data.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Strategies</b>                                                      | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

|         |                                                                                                                                            |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Week 5  | Continuous random variables. Probability Density functions.                                                                                |
| Week 6  | Normal Distribution. Approximation to Binomial and Poisson, Distribution. Exponential distribution. Other continuous distributions.        |
| Week 7  | Joint probability function. Multiple discrete and continuous random variables.                                                             |
| Week 8  | Covariance and correlation. Bivariate Normal Distribution. Linear combination of random variables. Functions of random variables.          |
| Week 9  | Parameter estimation. Properties of estimators. Method of Moments.                                                                         |
| Week 10 | Method of Maximum likelihood.                                                                                                              |
| Week 11 | Interval estimation. Inference on the mean of a population: variance known or unknown.<br>Inference on the variance of a normal population |
| Week 12 | Hypothesis testing about the mean and Proportion: Small and Large Sample                                                                   |
| Week 13 | Hypothesis testing: Two Populations                                                                                                        |
| Week 14 | Introduction, Data Summary and Presentation                                                                                                |
| Week 15 | Probability: Addition rule, conditional probability, multiplication rule and Bayes Theorem.                                                |
| Week 16 | Preparatory week before the final Exam                                                                                                     |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |
|--------|------------------|
| Week 1 |                  |
| Week 2 |                  |

### Learning and Teaching Resources

### Grading Scheme

| مخطط الدرجات                |                  |                     |           |                                       |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Module Aims</b><br>أهداف المادة الدراسية                      | 5. Basic heat transfer mechanisms (conduction and radiation).<br>6. Heat transfer by conduction in solids for steady-state and transient conditions.<br>7. Heat transfer by thermal radiation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Module Learning Outcomes</b><br>مخرجات التعلم للمادة الدراسية | 5. To understand the conduction and radiation heat Transfer Mechanisms.<br>6. To recognize Heat Transfer from Finned Surfaces.<br>7. To derive the formula of steady-state conduction heat transfer in solids using numerical methods.<br>8. To solve unsteady-state conduction heat transfer in small and large bodies and also by using numerical methods.<br>9. To Illustrate Radiation heat transfer from different colored bodies.<br>10. To Describe Radiation Heat Transfer, View Factor, Diffuse, Gray Surfaces, Radiosity, and Radiation Shields.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students at the lab. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|-----|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2 |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 72  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 4.8 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 150 |                                                                            |     |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |                         | Time/Number | Weight (Marks)                    | Week Due   | Relevant Learning Outcome |
|-----------------------------|-------------------------|-------------|-----------------------------------|------------|---------------------------|
| <b>Formative assessment</b> | Quizzes                 | 5           | 25% (25)                          | 5-10       | LO #1, 2 and 5            |
|                             | Online Assignments (HW) | 2           | 4% (4)                            | 2, 12      | LO # 3, 4 and 6           |
|                             | Onsite Assignments      | 5           | 5% (5)                            | 4, 13      | LO # 3, 4 and 6           |
|                             | Report                  |             |                                   |            |                           |
|                             | Lab                     | 3           | 6% (6)                            | Continuous | LO # All                  |
| <b>Summative assessment</b> | Midterm Exam            | 2 hr        | 10% (10)                          | 9          | LO #1,2,3,4               |
|                             | Final Exam              | 3 hr        | 50% (50)                          | 16         | LO # All                  |
| <b>Total assessment</b>     |                         |             | <b>100%</b><br><b>(100 Marks)</b> |            |                           |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                  |
|---------|-------------------------------------------------------------------|
| Week 1  | Basic of heat transfer                                            |
| Week 2  | Mechanism of heat transfer,                                       |
| Week 3  | Forms of heat transfer.                                           |
| Week 4  | Multi- and one dimensional conduction heat transfer               |
| Week 5  | Boundary and initial conditions, thermal resistance               |
| Week 6  | Heat sources systems (heat generation)                            |
| Week 7  | Heat transfer from fins                                           |
| Week 8  | Kinds of fins, fin efficiency and fin effectiveness               |
| Week 9  | Steady-state conduction multi-dimensions (nodal solution)         |
| Week 10 | Numerical method for analysis.                                    |
| Week 11 | Unsteady-state conduction (transient)                             |
| Week 12 | Lumped heat capacity system.                                      |
| Week 13 | Large body method                                                 |
| Week 14 | Transient numerical method                                        |
| Week 15 | Transient heat conduction in plane walls, cylinders, and spheres. |
| Week 16 | <b>Preparatory week before the final Exam</b>                     |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered              |
|--------|-------------------------------|
| Week 1 | Lab 1: Linear Heat Conduction |
| Week 2 | Lab 1: Linear Heat Conduction |
| Week 3 | Lab 1: Linear Heat Conduction |
| Week 4 | Lab 2: Thermal Insolation     |
| Week 5 | Lab 2: Thermal Insolation     |
| Week 6 | Lab 2: Thermal Insolation     |
| Week 7 | Lab 3: Radial Heat Conduction |
| Week 8 | Lab 3: Radial Heat Conduction |

|         |                                                     |
|---------|-----------------------------------------------------|
| Week 9  | Lab 3: Radial Heat Conduction                       |
| Week 10 | Lab 4: Conduction Heat Transfer from finned surface |
| Week 11 | Lab 4: Conduction Heat Transfer from finned surface |
| Week 12 | Lab 4: Conduction Heat Transfer from finned surface |
| Week 13 | Lab 5: Heat Transfer by Radiation                   |
| Week 14 | Lab 5: Heat Transfer by Radiation                   |
| Week 15 | Lab 5: Heat Transfer by Radiation                   |

|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                                |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b>                                                      | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |

| <b>Strategies</b>                                                      | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn various methods for analyzing the time response, frequency response and stability of the systems.</p> <p>This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

| Week 1                                                     | Differential Equations (D.E) |
| Week 2                                                     | Matrices                     |
| Week 3                                                     | Matrices                     |
| Week 4                                                     | Special Functions            |
| Week 5                                                     | Special Functions            |
| Week 6                                                     | Laplace Transformation       |
| Week 7                                                     | Laplace Transformation       |
| Week 8                                                     | Laplace Transformation       |
| Week 9                                                     | Fourier Series               |
| Week 10                                                    | Fourier Series               |

|         |                                        |
|---------|----------------------------------------|
| Week 11 | Fourier Series                         |
| Week 12 | Partial Differential Equations         |
| Week 13 | Partial Differential Equations         |
| Week 14 | Partial Differential Equations         |
| Week 15 | Revision problem classes               |
| Week 16 | Preparatory week before the final Exam |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |
|--------|------------------|
| Week 1 |                  |
| Week 2 |                  |

### Learning and Teaching Resources

مصادر التعلم والتدريس

|                   | Text                                                                                                          | Available in the Library? |
|-------------------|---------------------------------------------------------------------------------------------------------------|---------------------------|
| Required Texts    | Zill, D., Wright, W. S., & Cullen, M. R. (2011). Advanced engineering mathematics. Jones & Bartlett Learning. | Yes                       |
| Recommended Texts | Erwin Kreyszig, Advanced Engineering Mathematics, 10th edition, 2011, John Wiley.                             | Yes                       |
| Websites          |                                                                                                               |                           |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

## Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

|                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. Teaching students how to classify engines and their components and calculate efficiency.</li> <li>2. Study of standard air cycles and how to calculate workout and mean effective pressure and efficiency for each standard cycle.</li> <li>3. Solve fuel-air and actual cycles and how to calculate their efficiency and apply them to the engines when the temperature is the specific heat as a function of temperature.</li> <li>4. Study the chemical reactions and calculate the amount of heat produced by the combustion process. As well as calculating the air to fuel ratio (A/F).</li> <li>5. Study fuels and know the properties of each fuel and the relationship between fuels.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. Understand the fundamentals, operation, and performance of internal combustion engines and their different types.</li> <li>2. Understand and calculate the various performance parameters of the engines.</li> <li>3. Identify Otto, Diesel, and Combined Cycles. Analysis of Intake and Exhaust.</li> <li>4. Comparison between three cycles Otto, Diesel, and Combined Cycles .</li> <li>5. Apply measurement of fuel and air consumption, volumetric efficiency, effect of air-fuel ratio .</li> <li>6. Apply compression ratio on engine power &amp; efficiency, pumping work.</li> <li>7. Air – Fuel cycle and their analysis .</li> <li>8. Actual Fuel-Air cycle with changing <math>C_p</math> and <math>C_v</math> with temperature .</li> <li>9. Discover Fuels and Combustion, Gasoline characteristics, alcohol refining and octane &amp; cetane rating, diesel fuel oil classification, combustion equation.</li> <li>10. Discover knock and the engine variable detonation, combustion theories, chemical equilibrium and dissociation, energy charts for unburned air mixtures, combustion chamber requirement.</li> </ol> |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Week 1                                                     | Engine Types and Their Operation, Engine Design and Operating Parameters. |
| Week 2                                                     | Engine Types and Their Operation, Engine Design and Operating Parameters. |
| Week 3                                                     | Engine Types and Their Operation, Engine Design and Operating Parameters. |
| Week 4                                                     | Air standard Cycles.                                                      |
| Week 5                                                     | Air standard Cycles.                                                      |
| Week 6                                                     | Air standard Cycles.                                                      |
| Week 7                                                     | Med Exam                                                                  |
| Week 8                                                     | Fuel-Air Cycles, and Actual Cycles.                                       |
| Week 9                                                     | Fuel-Air Cycles, and Actual Cycles.                                       |

|         |                                       |
|---------|---------------------------------------|
| Week 10 | Fuel-Air Cycles, and Actual Cycles.   |
| Week 11 | Thermochemistry of Fuel-Air Mixtures. |
| Week 12 | Thermochemistry of Fuel-Air Mixtures. |
| Week 13 | Thermochemistry of Fuel-Air Mixtures. |
| Week 14 | Fuel Types.                           |
| Week 15 | Fuel Types.                           |
| Week 16 | Final Exam                            |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|            | Material Covered                                                                     |
|------------|--------------------------------------------------------------------------------------|
| Week 2-4   | Calculate the air consumption rate of a diesel engine.                               |
| Week 5-7   | Calculate the fuel consumption rate of a diesel engine                               |
| Week 8-10  | Calculating and graphical representation of the braking power for the diesel engines |
| Week 11-14 | Evaluate the performance of a four-stroke diesel engine                              |

### Learning and Teaching Resources

مصادر التعلم والتدريس

|                   | Text                                                    | Available in the Library? |
|-------------------|---------------------------------------------------------|---------------------------|
| Required Texts    | Internal Combustion Engine Fundamentals by J.B. Heywood | Yes                       |
| Recommended Texts | Introduction to I. C. Engines by Richard Stone          | Yes                       |
| Websites          |                                                         |                           |

### Grading Scheme

مخطط الدرجات

| Group | Grade | التقدير | Marks (%) | Definition |
|-------|-------|---------|-----------|------------|
|-------|-------|---------|-----------|------------|

|                                     |                        |                     |          |                                       |
|-------------------------------------|------------------------|---------------------|----------|---------------------------------------|
| <b>Success Group<br/>(50 – 100)</b> | <b>A</b> –Excellent    | امتياز              | 90 – 100 | Outstanding Performance               |
|                                     | <b>B</b> –Very Good    | جيد جدا             | 80 – 89  | Above average with some errors        |
|                                     | <b>C</b> –Good         | جيد                 | 70 – 79  | Sound work with notable errors        |
|                                     | <b>D</b> –Satisfactory | متوسط               | 60 – 69  | Fair but with major shortcomings      |
|                                     | <b>E</b> –Sufficient   | مقبول               | 50 – 59  | Work meets minimum criteria           |
| <b>Fail Group<br/>(0 – 49)</b>      | <b>FX</b> – Fail       | راسب (قيد المعالجة) | (45-49)  | More work required but credit awarded |
|                                     | <b>F</b> – Fail        | راسب                | (0-44)   | Considerable amount of work required  |
|                                     |                        |                     |          |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone “near-pass fails” so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Module Approval</b>                          |      |          |           |

| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <p>Explores fundamentals of gas dynamics and compressible fluid flow including<br/>One-dimensional isentropic flow [15 hrs]<br/>Flow in variable area ducts; nozzles and diffusers [10 hrs]<br/>Normal shock relations; oblique shocks and expansion waves [10 hrs]<br/>The moving normal shock wave [10 hrs]<br/>The reflected oblique shock wave [10 hrs]<br/>Fanno curve and Fanno flow equations, solution of Fanno flow equations, variation of flow properties [15 hrs]<br/>One-dimensional flow with friction [10 hrs]<br/>Rayleigh curve and Rayleigh flow equations, variations of flow properties, maximum heat transfer, tables and charts for Rayleigh flow. [10 hrs]<br/>One-dimensional flow heating or cooling [10 hrs]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>The most important strategies that will be adopted in delivering this module are:</p> <ul style="list-style-type: none"> <li>- Allow students to actively participate in the learning process with class discussions and exercises that support the initiative.</li> <li>- Incorporate flexible seating into my classroom</li> <li>- Knowledge application and Extended critical thinking</li> <li>- <b>Do Summative assessments</b> Occurs at end of chapter</li> <li>- <b>Do Formative Assessment</b> occurs through chapter to Covers complete content areas</li> <li>- Case-Based Learning.</li> </ul> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 63  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 4.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 37  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 2.47 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 100 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|                             |                                | Time/Number | Weight (Marks)          | Week Due | Relevant Learning Outcome |
|-----------------------------|--------------------------------|-------------|-------------------------|----------|---------------------------|
| <b>Formative assessment</b> | <b>Quizzes</b>                 | 5           | <b>25% (25)</b>         | 4, 9     | LO # 1, 2,3,9, 10 and 11  |
|                             | <b>Online Assignments (HW)</b> | 3           | <b>6% (6)</b>           | 3, 12    | LO # 4,5 and 6            |
|                             | <b>Onsite Assignments</b>      | 3           | <b>5% (5)</b>           | 4, 11    | LO # 4,5 and 6            |
|                             | <b>Report</b>                  | 1           | <b>4% (4)</b>           | 13       | LO # 7 and 8              |
|                             | <b>Lab</b>                     |             |                         |          |                           |
| <b>Summative assessment</b> | <b>Midterm Exam</b>            | 2 hr        | <b>10% (10)</b>         | 9        | LO # 1, 2,3, 4,5, 6 and 7 |
|                             | <b>Final Exam</b>              | 3 hr        | <b>50% (50)</b>         | 16       | LO # All                  |
| <b>Total assessment</b>     |                                |             | <b>100% (100 Marks)</b> |          |                           |

| <b>Delivery Plan (Weekly Syllabus)</b><br>المنهاج الاسبوعي النظري |                                                                            |
|-------------------------------------------------------------------|----------------------------------------------------------------------------|
|                                                                   | Material Covered                                                           |
| Week 1                                                            | Wave propagation phenomenon in subsonic, sonic and supersonic gas flows.   |
| Week 2                                                            | One-dimensional isentropic flow.                                           |
| Week 3                                                            | The relation between pressure and gas velocity in nozzles and jet engines. |
| Week 4                                                            | Compressible flow having stationary normal shock wave.                     |
| Week 5                                                            | Compressible flow having moving normal shock wave.                         |
| Week 6                                                            | Compressible flow having oblique shock wave.                               |
| Week 7                                                            | Mid-term Exam                                                              |
| Week 8                                                            | Compressible flow having reflected oblique shock wave.                     |
| Week 9                                                            | The gas flow in constant area duct with friction effects.                  |
| Week 10                                                           | Fanno curve and Fanno flow equations.                                      |
| Week 11                                                           | Solution of Fanno flow equations.                                          |
| Week 12                                                           | Variation of flow properties in Fanno flow.                                |
| Week 13                                                           | One-dimensional flow heating or cooling.                                   |
| Week 14                                                           | Rayleigh curve and Rayleigh flow equations, variations of flow properties. |
| Week 15                                                           | Maximum heat transfer, tables and charts for Rayleigh flow.                |
| Week 16                                                           | Preparatory week before the final Exam                                     |

|--------------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                          | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                                |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn various methods for analyzing the time response, frequency response and stability of the systems.</p> <p>This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 47  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 3.13 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 125 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                         | Time/Number | Weight (Marks)      | Week Due   | Relevant Learning Outcome |
|----------------------|-------------------------|-------------|---------------------|------------|---------------------------|
| Formative assessment | Quizzes                 | 5           | 25% (25)            | 5- 10      | LO #1, 2 and 5            |
|                      | Online Assignments (HW) | 2           | 4% (4)              | 2, 11      | LO # 3, 4 and 5           |
|                      | Onsite Assignments      | 5           | 5% (5)              | 4, 12      | LO # 3, 4 and 5           |
|                      | Report                  |             |                     |            |                           |
|                      | Lab                     | 3           | 6% (6)              | Continuous | LO # All                  |
| Summative assessment | Midterm Exam            | 2 hr        | 10% (10)            | 9          | LO #1,2,3 and 4           |
|                      | Final Exam              | 3 hr        | 50% (50)            | 16         | LO # All                  |
| Total assessment     |                         |             | 100%<br>(100 Marks) |            |                           |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                            |
|---------|-----------------------------------------------------------------------------|
| Week 1  | Error Analysis                                                              |
| Week 2  | Roots of equations                                                          |
| Week 3  | Roots of equations                                                          |
| Week 4  | Simultaneous Linear algebraic Equations                                     |
| Week 5  | Numerical Differentiation and Integration                                   |
| Week 6  | Numerical Differentiation and Integration                                   |
| Week 7  | Interpolation and Curve Fitting                                             |
| Week 8  | Initial Value Problem ( Euler's Method & Runge-Kutta 2 <sup>nd</sup> )      |
| Week 9  | Initial Value Problem ( Euler's Method & Runge-Kutta 2 <sup>nd</sup> )      |
| Week 10 | Initial Value Problem (Runge-Kutta 4 <sup>th</sup> &Higher Order Equations) |
| Week 11 | Initial Value Problem (Runge-Kutta 4 <sup>th</sup> &Higher Order Equations) |
| Week 12 | Boundary Value Problem (Finite Difference Method)                           |
| Week 13 | Boundary Value Problem (Finite Difference Method)                           |
| Week 14 | Numerical Solutions of Partial Differential Equations                       |
| Week 15 | Numerical Solutions of Partial Differential Equations                       |
| Week 16 | Preparatory week before the final Exam                                      |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|            | Material Covered                                                                      |
|------------|---------------------------------------------------------------------------------------|
| Week 2-4   | Simultaneous Linear algebraic Equations(Matlab)                                       |
| Week 5-7   | Interpolation and Curve Fitting(Matlab)                                               |
| Week 8-10  | Initial Value Problem ( Euler's Method & Runge-Kutta 2 <sup>nd</sup> ) in Matlab      |
| Week 11-14 | Initial Value Problem (Runge-Kutta 4 <sup>th</sup> &Higher Order Equations) in Matlab |

| Group                          | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

|                          |                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Strategies</b></p> | <p>The main strategy is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students at the lab.</p> |

| <b>Recommended Texts</b> | F. P. Incropera & D. P. Dewitt, "Fundamentals of Heat and Mass Transfer", 2011.                                                 | Yes                       |
| <b>Websites</b>          |                                                                                                                                 |                           |

### Grading Scheme

مخطط الدرجات

| Group                               | Grade                   | التقدير             | Marks (%) | Definition                            |
|-------------------------------------|-------------------------|---------------------|-----------|---------------------------------------|
| <b>Success Group<br/>(50 - 100)</b> | <b>A</b> - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                     | <b>B</b> - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                     | <b>C</b> - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                     | <b>D</b> - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                     | <b>E</b> - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| <b>Fail Group<br/>(0 - 49)</b>      | <b>FX</b> - Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                     | <b>F</b> - Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54). The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |

|                             | Final Exam              | 3 hr        | 50% (50)            | 16         | LO # All                  |
| <b>Total assessment</b>     |                         |             | 100%<br>(100 Marks) |            |                           |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered             |
|---------|------------------------------|
| Week 1  | Balancing of rotating masses |
| Week 2  | Balancing of rotating masses |
| Week 3  | Balancing of rotating masses |
| Week 4  | Spur Gearing                 |
| Week 5  | Spur Gearing                 |
| Week 6  | Spur Gearing                 |
| Week 7  | Gear Trains                  |
| Week 8  | Gear Trains                  |
| Week 9  | Gear Trains                  |
| Week 10 | Belt Drives                  |
| Week 11 | Belt Drives                  |
| Week 12 | Belt Drives                  |
| Week 13 | Cams                         |
| Week 14 | Cams                         |
| Week 15 | Cams                         |
| Week 16 | Final Exams                  |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|            | Material Covered                                                                  |
|------------|-----------------------------------------------------------------------------------|
| Week 1     | Introduction                                                                      |
| Week 2-4   | Lab 1: Statistical procedure to find the best fit for a set of experimental data. |
| Week 5-7   | Lab 2: Static balancing of rotating masses.                                       |
| Week 8-10  | Lab 3: Dynamic balancing of rotating masses.                                      |
| Week 11-14 | Lab 4: Determination of moment of inertia of a flywheel.                          |

| <b>Strategies</b>                                                      | <p>Manufacturing Processes is compulsory course which is offered to 3th year for Mechanical Engineering Department students and equips students to study the properties of engineering materials well as the limits of their use and the classification of these materials according to their structure. Also, the selecting methods of engineering materials for each application are investigated.</p> <p>The course material is presented in a series of online or face-to-face lectures and/or videos of the manufacturing processes. Students are expected to conduct a significant amount of self-directed learning for this module. The core teaching material is supplemented by weekly tutorial sessions. With a strong emphasis on understanding deformation process (rolling, forging, extrusion, wire and rod drawing and sheet metal deformation) and Other deformation processes related to them. as well as applying their knowledge to current research projects within the School of Engineering.</p> |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                                                                |
|---------|-----------------------------------------------------------------------------------------------------------------|
| Week 1  | Non-renewable& Renewable Energy Resources.                                                                      |
| Week 2  | Advantages and disadvantages of non-conventional energy sources.                                                |
| Week 3  | The physics of solar radiation; sky radiation.                                                                  |
| Week 4  | Calculation of radiation intercepted by surface beam.                                                           |
| Week 5  | Thermal energy losses from solar collector.                                                                     |
| Week 6  | The amount of heat absorbed by the collector and classification of different concentrating solar power systems. |
| Week 7  | Mid-term Exam                                                                                                   |
| Week 8  | The principal working of PV cell.                                                                               |
| Week 9  | Calculation the power of the domestic house devices.                                                            |
| Week 10 | The principal working of wind energy.                                                                           |
| Week 11 | Classification of different wind turbines types.                                                                |
| Week 12 | General layout of a hydroelectric power plant.                                                                  |
| Week 13 | Classification of hydraulic turbines.                                                                           |
| Week 14 | The principal working of geothermal power plants.                                                               |
| Week 15 | classification of geothermal power plants.                                                                      |
| Week 16 | Preparatory week before the final Exam                                                                          |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 63  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 4.2  |

|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| المنهاج الاسبوعي النظري         |                                                                                                                                                                                               |
|                                 | Material Covered                                                                                                                                                                              |
| Week 1                          | Plant layout: - Define organization structures & types, Productivity, basic concepts, classification, measurement and improvement.                                                            |
| Week 2                          | Define plant layout, Describe the objective and principles of plant layout.                                                                                                                   |
| Week 3                          | Explain Process Layout, Product Layout and Combination Layout                                                                                                                                 |
| Week 4                          | Operations Research: - Introduction to Operations Research and its applications,                                                                                                              |
| Week 5                          | Define Linear Programming Problem, Solution of L.P.P. by graphical method ,                                                                                                                   |
| Week 6                          | Evaluation of Project completion time by Critical Path Method and PERT (Simple problems)- Explain distinct features of PERT with respect to CPM.                                              |
| Week 7                          | Mid-term Exam + Unit-Step Forcing, Forced Response, the RLC Circuit                                                                                                                           |
| Week 8                          | Sinusoidal Forcing, Complex Forcing, Phasors, and Complex Impedance, Sinusoidal Steady State Response                                                                                         |
| Week 9                          | Inventory Control: - Classification of inventory. Objective of inventory control. Describe the functions of inventories. .                                                                    |
| Week 10                         | Explain and Derive economic order quantity for Basic model. (Solve numerical) . Define and Explain ABC analysis.                                                                              |
| Week 11                         | Plant maintenance: - Describe the objectives of plant maintenance. Describe the duties, functions and responsibilities of plant maintenance department.                                       |
| Week 12                         | Describe the types of maintenance: Preventive, Breakdown, Scheduled and Predictive maintenance                                                                                                |
| Week 13                         | Inspection and Quality Control: Define Inspection and Quality control. Describe planning of inspection. Describe types of inspection. Study of factors influencing the quality of manufacture |
| Week 14                         | Explain the Concept of statistical quality control, Control charts (X, R, P and C - charts). Solve related problems.                                                                          |

|                |                                                                                                                                                                                               |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Week 15</b> | Contemporary Quality Management Concepts Concept of total quality management (TQM) 8.2 ISO-9000/14000, concept & its evolution & implications. JIT, Six Sigma, 7S, Lean manufacturing [8 hrs] |
| <b>Week 16</b> | <b>Preparatory week before the final Exam</b>                                                                                                                                                 |

### Delivery Plan (Weekly Lab. Syllabus)

### Grading Scheme

مخطط الدرجات

| Group                           | Grade                   | التقدير             | Marks (%) | Definition                            |
|---------------------------------|-------------------------|---------------------|-----------|---------------------------------------|
| <b>Success Group (50 - 100)</b> | <b>A - Excellent</b>    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                 | <b>B - Very Good</b>    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                 | <b>C - Good</b>         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                 | <b>D - Satisfactory</b> | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                 | <b>E - Sufficient</b>   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| <b>Fail Group (0 - 49)</b>      | <b>FX – Fail</b>        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                 | <b>F – Fail</b>         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. To cover the basics of machine design, including the design process, engineering mechanics and materials, failure prevention under static and variable loading, and characteristics of the principal types of mechanical elements</li> <li>2. To offer a practical approach to the subject through a wide range of real-world applications and examples</li> <li>3. To encourage students to link design and analysis</li> <li>4. To encourage students to link fundamental concepts with practical component specification.</li> <li>5. To illustrate to students the variety of mechanical components available and emphasize the need to continue learning.</li> </ol>                                                                                                                                                                                                                                                                     |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. Apply stress analysis theory and appropriate criteria of failure to the design of simple machine elements</li> <li>2. Design shafts for static and variable stresses and estimate stress concentration.</li> <li>3. Design of Screws, Fasteners, and the Design of Nonpermanent Joints.</li> <li>4. Design of welding, bonding and other permanent joints.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Machine Design or Mechanical Design can be defined as the process by which resources or energy is converted into useful mechanical forms, or mechanisms so as to obtain useful output from the machines in the desired form as per the needs of the human beings. Machine design can lead to the formation of an entirely new machine or can lead to up-gradation or improvement of the existing machine.</p> <p>This course covers basic criteria of the performance and design of machine parts, determination of permissible and actual stresses. The first part of the course deals with the analysis and design of parts subjected to static loading, variable loading, and how to proportion them to successfully resist such conditions. The second part provides a classical treatment on the design of machine elements such as shafts, screws, fasteners, welding, and bonding by presenting established design methodologies as set by the appropriate organizations.</p> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                          |                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Strategies</b></p> | <p>The primary strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials, and by considering types of simple examples involving some homework activities for the students.</p> |

### Grading Scheme

مخطط الدرجات

| Group         | Grade         | التقدير | Marks (%) | Definition              |
|---------------|---------------|---------|-----------|-------------------------|
| Success Group | A - Excellent | امتياز  | 90 - 100  | Outstanding Performance |

|                        |                  |                     |         |                                       |
|------------------------|------------------|---------------------|---------|---------------------------------------|
| (50 - 100)             | B - Very Good    | جيد جدا             | 80 - 89 | Above average with some errors        |
|                        | C - Good         | جيد                 | 70 - 79 | Sound work with notable errors        |
|                        | D - Satisfactory | متوسط               | 60 - 69 | Fair but with major shortcomings      |
|                        | E - Sufficient   | مقبول               | 50 - 59 | Work meets minimum criteria           |
| Fail Group<br>(0 – 49) | FX – Fail        | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
|                        | F – Fail         | راسب                | (0-44)  | Considerable amount of work required  |
|                        |                  |                     |         |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The most important strategies that will be adopted in delivering this module are: <ul style="list-style-type: none"> <li>- Allow students to actively participate in the learning process with class discussions and exercises that support the initiative.</li> <li>- Incorporate flexible seating into my classroom</li> <li>- Knowledge application and Extended critical thinking</li> <li>- <b>Do Summative assessments</b> Occurs at end of chapter</li> <li>- <b>Do Formative Assessment</b> occurs through chapter to Covers complete content areas</li> <li>- Case-Based Learning.</li> </ul> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|-----|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2 |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 72  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 4.8 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 150 |                                                                            |     |

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                  | Time/Number | Weight (Marks) | Week Due | Relevant Learning Outcome |
|----------------------|------------------|-------------|----------------|----------|---------------------------|
| Formative assessment | Quizzes          | 5           | 25% (25)       | 3, 12    | LO #1, 2, 3,4,5,6 and 7   |
|                      | Assignments (HW) | 2           | 5% (5)         | 2, 12    | LO # 2, 3, 4,5,6 and 7    |

|                      |              |      |                  |            |                 |
|----------------------|--------------|------|------------------|------------|-----------------|
|                      | Report       |      |                  | Continuous |                 |
|                      | Activities   | 1    | 4% (4)           |            |                 |
|                      | Lab          | 4    | 6% (6)           | 13         | LO # 5, 6 and 7 |
| Summative assessment | Midterm Exam | 2 hr | 10% (10)         | 7          | LO # 1-7        |
|                      | Final Exam   | 3 hr | 50% (50)         | 16         | All             |
| Total assessment     |              |      | 100% (100 Marks) |            |                 |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                    |
|---------|---------------------------------------------------------------------|
| Week 1  | Introduction to air conditioning                                    |
| Week 2  | Moist air properties                                                |
| Week 3  | Moist air properties                                                |
| Week 4  | Psychrometric chart and psychrometry processes                      |
| Week 5  | Psychrometric chart and psychrometry processes                      |
| Week 6  | Thermal comfort                                                     |
| Week 7  | Indoor and outdoor design conditions                                |
| Week 8  | Mid Term Exam                                                       |
| Week 9  | Heating load calculation                                            |
| Week 10 | Heating load calculation                                            |
| Week 11 | Cooling load calculation                                            |
| Week 12 | Cooling load calculation                                            |
| Week 13 | Air conditioning systems                                            |
| Week 14 | Air conditioning systems , Air distribution systems and duct design |
| Week 15 | Air distribution systems and duct design                            |
| Week 16 | Preparatory week before the final Exam                              |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                           |
|--------|--------------------------------------------|
| Week 1 | Lab 1: Cooling & dehumidification process. |

|         |                                            |
|---------|--------------------------------------------|
| Week 2  | Lab 1: Cooling & dehumidification process. |
| Week 3  | Lab 1: Cooling & dehumidification process. |
| Week 4  | Lab 2: Heating & humidification process    |
| Week 5  | Lab 2: Heating & humidification process    |
| Week 6  | Lab 2: Heating & humidification process    |
| Week 7  | .                                          |
| Week 8  | Lab 3: Central air conditioning system.    |
| Week9   | Lab 3: Central air conditioning system.    |
| Week 10 | Lab 3: Central air conditioning system     |
| Week 11 | Lab4: Cooling tower performance.           |
| Week 12 | Lab4: Cooling tower performance.           |
| Week 13 | Lab4: Cooling tower performance.           |
| Week 14 |                                            |
| Week 15 |                                            |

### Learning and Teaching Resources

#### مصادر التعلم والتدريس

|                   | Text                                                                                                                                  | Available in the Library? |

### Grading Scheme

#### مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| Module Approval                       |      |          |           |
|---------------------------------------|------|----------|-----------|
| المصادقة على وصف المادة الدراسية      |      |          |           |
|                                       | Name | Date     | Signature |
| Module Leader Approval                |      | 8/6/2023 |           |
| Peer Reviewer Name                    |      | 8/6/2023 |           |

| <b>Module Aims</b><br>أهداف المادة الدراسية | The goals of this course are to enable students to: <ol style="list-style-type: none"> <li>1. Formulate mathematical models of problems in vibrations using Newton's second law or energy principles.</li> <li>2. Familiarize the student with the underlying concepts of linear mechanical vibrations through analysis of the free and forced responses of various single degree-of-freedom (SDOF) and multiple degree-of-freedom (MDOF) systems.</li> <li>3. Determine a complete solution to the modeled mechanical vibration problems.</li> <li>4. Correlate results from the mathematical model to physical characteristics of the actual system</li> </ol> |
| <b>Module Learning Outcomes</b>             | <ol style="list-style-type: none"> <li>1. Derive the equations of motion for single degree of freedom (SDOF) and multi-degree of freedom systems (MDOF).</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn various methods for analyzing the dynamic response of various mechanical systems.</p> <p>This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 47  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 3.13 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 125 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                  | Time/Number | Weight (Marks)  | Week Due | Relevant Learning Outcome |
|----------------------|------------------|-------------|-----------------|----------|---------------------------|
| Formative assessment | Quizzes          | 5           | <b>25% (25)</b> | 3, 5, 10 | LO #1, 2, 3 and 4         |
|                      | Assignments (HW) | 2           | <b>5% (5)</b>   | 2, 8, 12 | LO # 1, 2, 3 and 5        |
|                      | Report           |             |                 | 1-12     | LO #1, 2 and 3            |

|                      |              |      |                  |    |                      |
|----------------------|--------------|------|------------------|----|----------------------|
|                      | Activities   |      | 4% (4)           |    |                      |
|                      | Lab          |      | 6% (6)           | -  | -                    |
| Summative assessment | Midterm Exam | 2 hr | 10% (10)         | 7  | LO # 1, 2 and 3      |
|                      | Final Exam   | 3 hr | 50% (50)         | 16 | LO #1, 2, 3, 4 and 5 |
| Total assessment     |              |      | 100% (100 Marks) |    |                      |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|         | Material Covered                                                                                                                                                                                    |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 1  | Fundamentals of Vibration Concepts of Vibration                                                                                                                                                     |
| Week 2  | Fundamentals of Vibration Harmonic Motion                                                                                                                                                           |
| Week 3  | Free Vibration of Undamped Systems Vibration Analysis/Number of Degrees of Freedom (DOF)                                                                                                            |
| Week 4  | Free vibration of undamped SDOF systems - Energy Method                                                                                                                                             |
| Week 5  | Free vibration of undamped SDOF systems -Rayleigh Method: Effective Mass                                                                                                                            |
| Week 6  | Free Vibration of Damped Systems- Damping Element Equation of Motion<br>Critical Damping Constant and the Damping Ratio.<br>Logarithmic Decrement                                                   |
| Week 7  | Free Vibration of Damped Systems- Critical Damping Constant and the Damping Ratio.<br>Logarithmic Decrement                                                                                         |
| Week 8  | Free Vibration of Damped Systems- Logarithmic Decrement                                                                                                                                             |
| Week 9  | Forced Harmonic Vibration Harmonic Excitation of an Undamped System Under Harmonic Force                                                                                                            |
| Week 10 | Forced Harmonic Vibration Harmonic Excitation of a Damped System Under Harmonic Force<br>Magnification Factor                                                                                       |
| Week 11 | Forced Harmonic Vibration Response of Damped System Under $F(t) = F_0 e^{i\omega t}$<br>Frequency Response<br>Base Excitation                                                                       |
| Week 12 | Response of a Damped System Under Rotating Unbalance<br>Forced Vibration with Coulomb Damping<br>Forced Vibration with Hysteresis Damping<br>Vibration Isolation<br>Vibration-Measuring Instruments |
| Week 13 | Free Vibrations of Multi-Degree-of- Freedom Systems Two-Degree-of- Freedom Systems                                                                                                                  |
| Week 14 | Free Vibrations of Multi-Degree-of- Freedom Systems Finding Natural Frequencies and modes                                                                                                           |
| Week 15 | Free Vibrations of Multi-Degree-of- Freedom Systems Coordinate Coupling Multi-Degree-of- Freedom Systems                                                                                            |
| Week 16 | Preparatory week before the final Exam                                                                                                                                                              |

### Delivery Plan (Weekly Lab. Syllabus)

| المنهاج الاسبوعي للمختبر |                                                                  |
|--------------------------|------------------------------------------------------------------|
|                          | Material Covered                                                 |
| Week 1-3                 | Determination of Single and Combine Spring Constants             |
| Week 4-6                 | Dynamically Determination of Single and Combine Spring Constants |
| Week 7-9                 | Pendulum Periods and Gravitational Acceleration                  |
| Week 10-12               | Perform Forced Vibration near Natural Frequency                  |

| Learning and Teaching Resources |                                                                                                                                                                                                                                                             |                           |

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <b>Strategies</b>                                                      | Engineering Materials is compulsory course which is offered to 4th year for Mechanical Engineering Department students and equips students to study the properties of engineering materials well as the limits of their use and the classification of these materials according to their structure. Also, the selecting methods of engineering materials for each application are investigated.<br>The course material is presented in a series of online or face-to-face lectures and/or videos of the manufacturing processes. Students are expected to conduct a significant amount of self-directed learning for this module. The core teaching material is supplemented by weekly tutorial sessions. With a strong emphasis on understanding all engineering material properties and the main features that could be used for select a suitable material in different industry fields and their application and other factors related to them. As well as applying their knowledge to current research projects within the School of Engineering. |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group                  | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |

|          |          |      |        |                                      |
|----------|----------|------|--------|--------------------------------------|
| (0 – 49) | F – Fail | راسب | (0-44) | Considerable amount of work required |
|          |          |      |        |                                      |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| Module Aims<br>أهداف المادة الدراسية                      | The goals of this course are to enable students:<br>1. To understand the mathematical characteristics of the governing equations for fluid flow and heat transfer.<br>2. To develop skills in computational fluid dynamics to address engineering problems.<br>3. To apply Finite difference method in solving different type of Partial Differential Equations (PDEs) that descript different fluid dynamics and heat transfer problems.<br>4. To learn and practice in using ANSYS FLUENT in design, meshing and solving various CFD applications. |
| Module Learning Outcomes<br>مخرجات التعلم للمادة الدراسية | Upon the successful completion of this course, students will be able:<br>1. To understand mathematical characteristics of partial differential equations.<br>2. To understand basic properties of computational methods.<br>3. To learn computational solution techniques for various types of partial differential equations.<br>4. To learn how to use Ansys Fluent as a commercial code for solving problems by numerical methods.                                                                                                                |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |      |
|--------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------|------|
| <b>Structured SWL (h/sem)</b><br>الحمل الدراسي المنتظم للطالب خلال الفصل       | 78  | <b>Structured SWL (h/w)</b><br>الحمل الدراسي المنتظم للطالب أسبوعياً       | 5.2  |
| <b>Unstructured SWL (h/sem)</b><br>الحمل الدراسي غير المنتظم للطالب خلال الفصل | 47  | <b>Unstructured SWL (h/w)</b><br>الحمل الدراسي غير المنتظم للطالب أسبوعياً | 3.13 |
| <b>Total SWL (h/sem)</b><br>الحمل الدراسي الكلي للطالب خلال الفصل              | 125 |                                                                            |      |

### Module Evaluation

#### تقييم المادة الدراسية

|                      |                  | Time/Number | Weight (Marks) | Week Due   | Relevant Learning Outcome |
|----------------------|------------------|-------------|----------------|------------|---------------------------|
| Formative assessment | Quizzes          | 5           | 25% (25)       | 6, 13      | LO #1-3                   |
|                      | Assignments (HW) | 2           | 5% (5)         | 3, 12      | LO #2-3                   |
|                      | Report           |             |                | Continuous | LO #4                     |
|                      | Activities       | 1           | 4% (4)         |            |                           |
|                      | Lab              |             | 6% (6)         |            |                           |
| Summative assessment | Midterm Exam     | 2 hr        | 10% (10)       | 7          | LO #2,4                   |
|                      | Final Exam       | 3 hr        | 50% (50)       | 16         | All                       |
| Total assessment     |                  |             |                |            |                           |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                              |
|---------|---------------------------------------------------------------|
| Week 1  | Introduction to Computational Fluid Dynamics                  |
| Week 2  | Mathematical Modelling                                        |
| Week 3  | Mathematical Classification of Partial Differential Equations |
| Week 4  | Boundary Conditions                                           |
| Week 5  | NUMERICAL MODLEING AND SIMULATION                             |
| Week 6  | Discretization Method: Finite Difference Methods.             |
| Week 7  | FDM first order and second orders                             |
| Week 8  | FDM first order and second orders                             |
| Week 9  | NUMERICAL MODLEING AND SIMULATION                             |
| Week 10 | NUMERICAL MODLEING AND SIMULATION                             |
| Week 11 | Accuracy, Consistency, Stability and Convergence.             |
| Week 12 | NONLINEAR PROBLEMS                                            |
| Week 13 | NONLINEAR PROBLEMS                                            |
| Week 14 | Irregular shapes                                              |
| Week 15 | Irregular shapes                                              |
| Week 16 | Final Exam                                                    |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|        | Material Covered                  |
|--------|-----------------------------------|
| Week 1 | NUMERICAL MODLEING AND SIMULATION |
| Week 2 | NUMERICAL MODLEING AND SIMULATION |
| Week 3 | NUMERICAL MODLEING AND SIMULATION |
| Week 4 |                                   |
| Week 5 |                                   |

| أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Module Aims</b><br>أهداف المادة الدراسية              | The objectives of the course are as follows: <ol style="list-style-type: none"> <li>1. The objective of the Final Year Project is to demonstrate a student's ability to apply the knowledge and skills gained throughout his/her studies to a specific area in any topic in the mechanical engineering department in a methodical and analytical manner.</li> <li>2. Allow students to enhance their problem-solving and analytical skills.</li> <li>3. Make students aware of real-life constraints and allow them to critically evaluate alternatives before selecting a final option.</li> <li>4. Foster teamwork and effective collaboration skills.</li> <li>5. Enhance students' technical writing and professional communication skills.</li> <li>6. Developing the ability to critically analyze and evaluate current scientific achievements, generate new ideas when solving research and practical problems.</li> <li>7. Defining the area of scientific research and analyzing the state of the issue in the subject area under study; developing readiness and basic</li> </ol> |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                                                                   | <p>skills for self-formulation and solving problems that arise in the course of research activities and require in-depth professional knowledge.</p> <p>8. Processing and analysis of the results of theoretical and experimental research, the formation of skills to use modern technologies for collecting information, processing and interpreting the obtained empirical data.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p><b>Module Learning Outcomes</b></p> <p>مخرجات التعلم للمادة الدراسية</p>       | <ol style="list-style-type: none"> <li>1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.</li> <li>2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.</li> <li>3. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.</li> <li>4. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.</li> <li>5. Ability to comprehend professional and ethical responsibilities.</li> <li>6. An ability to function as a team member and as well as a leader in the project group.</li> <li>7. The ability to present what has been done in a scientific and practical manner and to answer the examination committee's inquiries convincingly as one team.</li> </ol> |

### Grading Scheme

| مخطط الدرجات                |                  |                     |           |                                       |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

## 7- Design of Machine Elements-II

| Module Information                 |                                      |                               |                                                                                                                                                                                                                                          |

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"> <li>1. To introduce students to the design and theory of common machine elements and to give students experience in solving design problems involving machine elements.</li> <li>2. To combine forces, moments, torques, stress and strength information to develop ability to analyze, design and/or select machine elements. With attention to safety, reliability, and societal and fiscal aspects.</li> <li>3. To require the student to prepare professional quality solutions and presentations to effectively communicate the results of analysis and design.</li> <li>4. To be acquainted with standards, safety, reliability, importance of dimensional parameters and manufacturing aspects in mechanical design.</li> </ol>                                                                                    |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. Recognize the fundamentals of the theory of lubrication and journal bearings</li> <li>2. Design of specific mechanical elements including: gears, gear trains, clutches, coupling, brakes, springs, ropes and chains drives.</li> <li>3. Recognize the fundamentals of the Rolling-Contact Bearings.</li> <li>4. Design and evaluation of a machine component that is created to satisfy a specific need. Also, gain an appreciation for and become proficient in applying the final steps of the engineering design process.</li> </ol>                                                                                                                                                                                                                                                                           |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Design of machine elements is defined as the use of imagination, scientific principles and engineering techniques to create elementary components of machine or structure economically, in order to satisfy the industry requirements and then needs of customers. The focus in this course is on blending fundamental development of concepts with practical specification of components so that students find them familiar with both the basis for decisions and the standards of industrial components.</p> <p>Fundamentals of gears are included to address the design of compound gear trains to achieve specified gear ratios. The discussion of the relationship between torque, speed, and power is clarified. Design of rolling bearing introduces the invariant, the statistical distribution of life as well as some useful deterministic</p> |

|  | <p>equations addressing load versus life at constant reliability. The importance of lubrication in reducing friction, wear, and heating of machine parts that move relative to each other is explained. Recent metallurgy developments in bearing materials combined with increased knowledge of the lubrication process give a possibility to design journal bearings with satisfactory lives with very good reliabilities. This course discusses the more frequently used types of springs, their necessary parametric relationships, and their design. Moreover, the course provides a classical treatment on the design of machine elements such as brakes, clutches, and flywheels, and their applications by presenting established design methodologies as set by the appropriate organizations.</p> |

| <b>Strategies</b>                                                      | <p>The primary strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials, and by considering types of simple examples involving some homework activities for the students.</p> |

### Module Evaluation

#### تقييم المادة الدراسية

|  | Time/Nu | Weight (Marks) | Week Due | Relevant Learning |
|--|---------|----------------|----------|-------------------|
|--|---------|----------------|----------|-------------------|

|                      |                  | Number | Percentage       | Weight     | Outcome                 |
|----------------------|------------------|--------|------------------|------------|-------------------------|
| Formative assessment | Quizzes          | 5      | 25% (25)         | 5, 10      | LO #1, 2, 3,4,5,6 and 7 |
|                      | Assignments (HW) | 2      | 5% (5)           | 2, 12      | LO # 2,3, , and 6       |
|                      | Report           |        |                  | Continuous |                         |
|                      | Activities       | 1      | 4% (4)           | 13         | LO # 2,3,4 and 7        |
|                      | Lab              | 3      | 6% (6)           |            |                         |
| Summative assessment | Midterm Exam     | 2 hr   | 10% (10)         | 7          | LO # 1-7                |
|                      | Final Exam       | 3 hr   | 50% (50)         | 16         | All                     |
| Total assessment     |                  |        | 100% (100 Marks) |            |                         |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

| Week    | Material Covered                             |
|---------|----------------------------------------------|
| Week 1  | Introduction and review of basic principles. |
| Week 2  | Vapour compression cycle and heat pumps.     |
| Week 3  | Vapour compression cycle and heat pumps.     |
| Week 4  | Refrigerants. + Exam 1                       |
| Week 5  | Vapour absorption cycle.                     |
| Week 6  | Vapour absorption cycle.                     |
| Week 7  | Air refrigeration systems.                   |
| Week 8  | Mid Term Exam                                |
| Week 9  | Air refrigeration systems.                   |
| Week 10 | Thermoelectric refrigeration.                |
| Week 11 | Thermoelectric refrigeration.                |
| Week 12 | Exam 2                                       |
| Week 13 | Vortex tube refrigeration.                   |
| Week 14 | Steam jet water vapour refrigeration system. |
| Week 15 | Introduction and review of basic principles. |
| Week 16 | Preparatory week before the final Exam       |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|         | Material Covered                        |
|---------|-----------------------------------------|
| Week 1  | Lab 1: Illustrative refrigeration unit. |
| Week 2  | Lab 1: Illustrative refrigeration unit. |
| Week 3  | Lab 1: Illustrative refrigeration unit. |
| Week 4  | Lab 2: Mechanical heat pump             |
| Week 5  | Lab 2: Mechanical heat pump             |
| Week 6  | Lab 2: Mechanical heat pump             |
| Week 7  |                                         |
| Week 8  | Lab 3: Thermo-electric refrigeration.   |
| Week 9  | Lab 3: Thermo-electric refrigeration.   |
| Week 10 | Lab 3: Thermo-electric refrigeration.   |
| Week 11 | Lab 4: Electrolux refrigerator.         |
| Week 12 | Lab 4: Electrolux refrigerator.         |
| Week 13 | Lab 4: Electrolux refrigerator.         |
| Week 14 |                                         |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير | Marks (%) | Definition                       |
|-----------------------------|------------------|---------|-----------|----------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز  | 90 - 100  | Outstanding Performance          |
|                             | B - Very Good    | جيد جدا | 80 - 89   | Above average with some errors   |
|                             | C - Good         | جيد     | 70 - 79   | Sound work with notable errors   |
|                             | D - Satisfactory | متوسط   | 60 - 69   | Fair but with major shortcomings |

|                        |                |                     |         |                                       |
|------------------------|----------------|---------------------|---------|---------------------------------------|
|                        | E - Sufficient | مقبول               | 50 - 59 | Work meets minimum criteria           |
| Fail Group<br>(0 – 49) | FX – Fail      | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
|                        | F – Fail       | راسب                | (0-44)  | Considerable amount of work required  |
|                        |                |                     |         |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Also, encourage students to learn various methods for analyzing the time response, frequency response and stability of the systems. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

| Delivery Plan (Weekly Syllabus) |                                                                                                  |
|---------------------------------|--------------------------------------------------------------------------------------------------|
| المنهاج الاسبوعي النظري         |                                                                                                  |
|                                 | Material Covered                                                                                 |
| Week 1                          | Introduction to automatic control system                                                         |
| Week 2                          | Representation of control systems - Mass, spring damper system                                   |
| Week 3                          | Representation of control systems -Hydraulic system, • - Pneumatic system                        |
| Week 4                          | Representation of control systems -Electrical system, - Thermal system, Servomotor Actuators     |
| Week 5                          | Block diagram reduction - Single-Input-single-Output (SISO)                                      |
| Week 6                          | Block diagram reduction: •Two-Input-single-Output                                                |
| Week 7                          | Block diagram reduction: •Multi-Input-single-Output (MISO)                                       |
| Week 8                          | Laplace transformation of linear equations                                                       |
| Week 9                          | Transient and steady-state responses- • Input functions                                          |
| Week 10                         | Transient and steady-state responses- • Response of First-Order Systems and Second-Order Systems |
| Week 11                         | Stability of control systems-• Routh criterion                                                   |
| Week 12                         | Stability of control systems-• Root locus method                                                 |
| Week 13                         | Measurement Systems - Instrument Characteristics- Standards, errors and Calibration techniques   |
| Week 14                         | Frequency Response - • Polar plot                                                                |
| Week 15                         | Frequency Response -• Bode diagram                                                               |
| Week 16                         | Preparatory week before the final Exam                                                           |

### Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

|            | Material Covered                                                 |
|------------|------------------------------------------------------------------|
| Week 1-3   | Laplace Transformation and Representation of Multi-Input Signals |
| Week 4-6   | Representation of First- Order System                            |
| Week 7-9   | Representation of Second- Order System                           |
| Week 10-13 | Determination of Transient Response Specifications               |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

[15hrs]</li> <li>• Elaborate the steam power plant essential parts and its classification. [10hrs]</li> <li>• Identifying the performance of gas turbines with modern enhancing efficiency methods including intercooling, reheating, and regeneration. [10hrs]</li> <li>• Understanding the essential components and working principles of diesel power plants along with performing heat balance of the plant. [10 hrs]</li> <li>• Ability to identify the basic principles of thermal-fission and fast-breeder nuclear power plants, such as pressurized-water, boiling-water, and heavy-water reactors. [10hrs]</li> <li>• Identifying the variable factors affecting in power generation and the variable load. [10hrs]</li> <li>• Utilization of solar energy in the power plants and its components [10hrs]</li> </ul> |

### Learning and Teaching Strategies

#### استراتيجيات التعلم والتعليم

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Strategies</b> | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. Also, through project assignments to involve the students in various power plants applications and techniques. |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Student Workload (SWL)

#### الحمل الدراسي للطالب

|                                                                                |     |                                                                            |     |

### Module Evaluation

#### تقييم المادة الدراسية

|                         |                  | Time/Number | Weight (Marks)   | Week Due   | Relevant Learning Outcome |
|-------------------------|------------------|-------------|------------------|------------|---------------------------|
| Formative assessment    | Quizzes          | 5           | 25% (25)         | 3, 5, 12   | LO #1 and 2, 3, 4 and 5   |
|                         | Assignments (HW) | 2           | 5% (5)           | 2, 12      | LO # 1, 4, 6              |
|                         | Report           | 1           | 5% (5)           | Continuous | Any LO                    |
|                         | Activities       |             | 5% (5)           |            |                           |
|                         | Lab              |             |                  |            |                           |
| Summative assessment    | Midterm Exam     | 2 hr        | 10% (10)         | 7          | LO # 1-3                  |
|                         | Final Exam       | 3 hr        | 50% (50)         | 16         | All                       |
| <b>Total assessment</b> |                  |             | 100% (100 Marks) |            |                           |

### Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

|         | Material Covered                                                |
|---------|-----------------------------------------------------------------|
| Week 1  | Introduction of thermodynamic cycles used in steam power plants |
| Week 2  | Advanced Rankine Cycle (Reheating, Regenerative)                |
| Week 3  | Advanced Rankine Cycle (Reheating, Regenerative)                |
| Week 4  | steam generators, steam condensers                              |
| Week 5  | Steam turbines                                                  |
| Week 6  | Introduction to gas turbine power plants                        |
| Week 7  | modification of the basic cycle (intercooling & reheating)      |
| Week 8  | modification of the basic cycle (Regeneration)                  |
| Week 9  | Introduction to Diesel Power Plant                              |
| Week 10 | Cooling, lubricating, supercharging of Diesel Power Plant       |
| Week 11 | Diesel engine performance and operation                         |
| Week 12 | Economics of Power Plants                                       |
| Week 13 | Cost analysis of a power plant                                  |
| Week 14 | Solar power plant components                                    |
| Week 15 | Solar radiation calculation                                     |
| Week 16 | Preparatory week before the final Exam                          |

The characteristics and selection of different finite elements used in finite element methods.</li> <li>3. The equilibrium equations and stress-strain relations for different boundary conditions encountered in structural and heat transfer continuum problems.</li> <li>4. The application of the FEM technique to dynamic problems and validate the solutions through simulation software for real time applications.</li> </ol>                                                                                                                                                                                      |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"> <li>1. Explain the shape function concepts of one- and two-dimensional elements for enriching knowledge on stiffness matrix and load vector.</li> <li>2. Apply numerical methods on one dimensional bar elements for obtaining displacements, stresses, strains, and reaction forces.</li> <li>3. Make use of shape functions of two degrees of freedom two noded truss and beam elements for obtaining stiffness matrix and load vector.</li> <li>4. Demonstrate the physical models of truss and beam elements by applying finite element method for displacements, stresses, and strains.</li> <li>5. Utilize the concepts of shape functions for developing stiffness matrix of triangular, axisymmetric and four noded elements.</li> </ol> |
| <p><b>Indicative Contents</b><br/>المحتويات الإرشادية</p>                | <p>Indicative content includes the following.</p> <ul style="list-style-type: none"> <li>• Background, history [ 2 hrs.]</li> <li>• Application of the direct stiffness method for tissues beams and frames [ 10 hrs.]</li> <li>• Meshing and post processing considerations, mesh convergency considerations [20 hrs.]</li> <li>• Problems and errors associated with applying FEM to the solution of actual problems [ 15 hrs.]</li> <li>• Revision problem classes [6 hrs.]</li> </ul>                                                                                                                                                                                                                                                                                           |

## Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

|                          |                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Strategies</b></p> | <p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p> |

### Grading Scheme

مخطط الدرجات

| Group                       | Grade            | التقدير             | Marks (%) | Definition                            |
|-----------------------------|------------------|---------------------|-----------|---------------------------------------|
| Success Group<br>(50 - 100) | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                             | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                             | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                             | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                             | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)      | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                             | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                             |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| <p><b>Module Aims</b><br/>أهداف المادة الدراسية</p>                      | <ol style="list-style-type: none"><li>1. The objective of the Final Year Project is to demonstrate a student's ability to apply the knowledge and skills gained throughout his/her studies to a specific area in any topic in the mechanical engineering department in a methodical and analytical manner.</li><li>2. Allow students to enhance their problem-solving and analytical skills.</li><li>3. Make students aware of real-life constraints and allow them to critically evaluate alternatives before selecting a final option</li><li>4. Foster teamwork and effective collaboration skills</li><li>5. Enhance students' technical writing and professional communication skills</li><li>6. Developing the ability to critically analyze and evaluate current scientific achievements, generate new ideas when solving research and practical problems</li><li>7. Defining the area of scientific research and analyzing the state of the issue in the subject area under study; developing readiness and basic skills for self-formulation and solving problems that arise in the course of research activities and require in-depth professional knowledge.</li><li>8. Processing and analysis of the results of theoretical and experimental research, the formation of skills to use modern technologies for collecting information, processing and interpreting the obtained empirical data</li></ol> |
| <p><b>Module Learning Outcomes</b><br/>مخرجات التعلم للمادة الدراسية</p> | <ol style="list-style-type: none"><li>1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.</li><li>2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.</li><li>3. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Strategies</b>                                                      | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through presentation, report, and poster by considering type of theoretical analysis, experiments and numerical simulation. |

### Delivery Plan (Weekly Syllabus)

#### المنهاج الاسبوعي النظري

|       | Material Covered                                                                                                                                                                                              |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1-5   | Experiments, accumulation and analysis of the results.                                                                                                                                                        |
| 6-7   | Processing of the data obtained for the preparation of an analytical review.                                                                                                                                  |
| 8-10  | Development of the final chapter of the thesis. Preparation of the results of practical implementation for patenting. Registration of accompanying documents for transfer to the intellectual property agency |
| 11-13 | Processing and interpretation of research results. Presentation and publication of the results in the form of theses, articles, presentation at the theoretical seminar of the profile Department.            |
| 14-15 | Scientific interpretation of the data obtained, their generalization, analysis of the research work done, design of theoretical and empirical materials in the form of a report on final project.             |

| Group                          | Grade            | التقدير             | Marks (%) | Definition                            |
| Success Group<br>(50 - 100)    | A - Excellent    | امتياز              | 90 - 100  | Outstanding Performance               |
|                                | B - Very Good    | جيد جدا             | 80 - 89   | Above average with some errors        |
|                                | C - Good         | جيد                 | 70 - 79   | Sound work with notable errors        |
|                                | D - Satisfactory | متوسط               | 60 - 69   | Fair but with major shortcomings      |
|                                | E - Sufficient   | مقبول               | 50 - 59   | Work meets minimum criteria           |
| Fail Group<br>(0 - 49)         | FX – Fail        | راسب (قيد المعالجة) | (45-49)   | More work required but credit awarded |
|                                | F – Fail         | راسب                | (0-44)    | Considerable amount of work required  |
|                                |                  |                     |           |                                       |

**Note:** Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
