Solved exercises for Normal distribution

## Solved exercises

1- Let $Z$ denote a normal random variable with mean 0 and standard deviation 1.
a Find $P(Z>2)$.
b Find $P(-2 \leq Z \leq 2)$.
c Find $P(0 \leq Z \leq 1.73)$.
By SND table

Solution : a ) Since $\mu=0$ and $\sigma=1$, then , $P(Z>2)=1-P(Z \leq 2)=1-0.9772=$. 0228.
b) $P(-2 \leq Z \leq 2)=2 \mathrm{P}(\mathrm{Z} \leq 2)-1=0.9544$
c) $P(0 \leq Z \leq 1.73)=\mathrm{P}(\mathrm{Z} \leq 1.73)-\mathrm{P}(\mathrm{Z} \leq 0)=0.9582-0.5=0.5482$

2- If Z is a standard normal random variable, find the value $z_{0}$ such that:

$$
\begin{array}{ll}
\text { a } & P\left(Z>z_{0}\right)=.5 . \\
\text { b } & P\left(Z<z_{0}\right)=.8643 . \\
\text { c } & P\left(-z_{0}<Z<z_{0}\right)=90 . \\
\text { d } & P\left(-z_{0}<Z<z_{0}\right)=.99 .
\end{array}
$$

## Solved exercises

Solution : a) $\mathrm{P}\left(\mathrm{Z}>z_{0}\right)=1-\mathrm{P}\left(\mathrm{Z} \leq z_{0}\right)=0.5 \longrightarrow \mathrm{P}\left(\mathrm{Z} \leq z_{0}\right)=0.5 \longrightarrow z_{0}=0$ The following table presents the standard normaldistribution. The probabilities tabled are

$$
P(X \leq x)=\Phi(x)=\int_{-\infty}^{1} \frac{1}{\sqrt{2 \pi}} e^{-w^{2} / 2} d w
$$

Note that only the probabitties for $x \geq 0$ are tabled. To obtain the probabilities for $x<0$, use the identity $\Phi(-x)=1-\Phi(x)$.

## Solved exercises

Solution : b) $\mathrm{P}\left(\mathrm{Z}<z_{0}\right)=0.8643 \Longleftrightarrow z_{0}=1.10$ (by table)
c) $\mathrm{P}\left(-z_{0}<\mathrm{Z}<z_{0}\right)=.90 \Longrightarrow 2 \mathrm{P}\left(\mathrm{Z}<z_{0}\right)-1=0.90 \Longrightarrow \mathrm{P}\left(\mathrm{Z}<z_{0}\right)=0.95$

Thus, $z_{0}=1.645$
3) company that manufactures and bottles apple juice uses a machine that automatically fills 16 -ounce bottles. There is some variation, however, in the amounts of liquid dispensed into the bottles that are filled. The amount dispensed has been observed to be approximately normally distributed with mean 16 ounces and standard deviation 1 ounce. Use Table of SND, to determine the proportion of bottles that will have more than 17 ounces dispensed into them.

## Solution:

Note that the value 17 is $(17-16) / 1=1$ standard deviation above the mean.
So, $\mathrm{P}(\mathrm{Z}>1)=.1587$.
Transform the value 17 to SND
