Writing Research Papers A Practical Guide By Bailey/ Powell/Shuttleworth

Third Stage

Chapter One: Introduction to The Research Paper Process

A Research paper: is a systematic process of collecting and analyzing information that will investigate a research problem or question, or to help a researcher to obtain a complete understanding of a situation. A research paper: is the library and practical paper which is assigned in undergraduate courses.

Q1-Why Write a Research Paper? (What are the reasons of writing a research paper?)

1- A research paper may be the most practical of all your college assignment. For one ,you learn about the recourses for research available in general and in your academic field. So research papers will be library research papers because your college library contains the sources you'll need to investigate, but not all recourses for research are in your library because some of your college courses may involve research with surveys, interviews, field studies, or laboratory work.

2- Learning what recourses are available for research is only one of the benefits and also learn how to deal with those resources. Many research sources will provide you with bits of knowledge both factual evidence

and the opinions of other people. Moreover, sources sometimes contain errors, which you will have to learn to recognize and will present conflicting evidence both facts that aren't the same and the opinions of authorities who don't agree.

- 3- Writing the research paper provides valuable experience. It forces you to develop an informed conclusion about your topic. Moreover, the writing itself provides experience in constructing and presenting an extended in depth argument based on a complex of information.
- 4- The research paper process is more than a challenging exercise in investigation and communication. Through the attention you focus on researching a topic and forming responsible conclusions about it.
- 5- The research paper process is not confined to college preparation. You will apply it in your future. The end product may not always be as formal as the academic research paper, but the skills you learn now as you study the research paper process will come into play.

Q2: How many Types of research paper?

There are two types the report and the persuasive (or thesis) paper.

A report: is an organized presentation of information about a subject, without an argumentative stance on the part of the writer. The writer collects, evaluates, organizes, and objectively restates the information found during research.

A persuasive paper: presents an idea (or thesis) that need support. As with a report, the writer collects, evaluates, organizes, and restates information; however, the overall presentation is intended not just to report on that information but to persuade readers to see the information in a particular way.

Q3: What are the steps in writing research paper?

- 1- Choosing and narrowing a topic Choose a topic that interests you and definitely one that is complex enough to have had various books and articles written about it but narrow enough to be dealt with within the length your instructor assigns.
- 2- Identifying sources Using the card catalog, indexes, and other research tools, you compile a tentative bibliography a list of books and articles for potential research.
- 3- Gathering support You evaluate the usefulness of the books and articles you locate, collect support material from them and develop a tentative outline of the paper.
- 4- Writing the paper You write and revise your paper, integrating material from your research with your own ideas.
- 5- Preparing the paper in final form You put the paper in final form, with attention to format conventions and a meticulous record acknowledging indebtedness for material from research sources, using notes and bibliography.
